

International Team A: Protecting our Planet starts with us!

How to save the environment at home? There are plenty of little steps that you can take at home to help save the environment. This is what we are doing during this period of confinement to protect our Planet.

WE READ, WE LEARN, WE KNOW 03/05/20, 09:59 HS

GOAL 13 IN ACTION

We can combat climate change together!

Fábio, Portugal

Poster about the environment

We must recycle at home!

Do your part! :)

Very well – ANÔNIMO

Fábio, Portugal

Hi! In our English's lesson we made some poems. This is mine. I hope you enjoy! :)

It's time to do something

**The sky is blue
The ocean too
We are polluting them
This is a problem!**

**WE need to breathe
Say no to greed
Don't cut trees
Who agrees?**

**This is the only planet
we don't have a substitute
but with our attitude
death is the future!**

**We are the polluters
so you must be the problem solver
if each one does his part
Pollution will be over!**

Viktoriq, Bulgaria

We must save our planet, because it is our home! Everyone wants to live in a nice and good place, so we must do it together and improve it with joint efforts.

We can do many things to save our planet Earth. We need to use less water when washing dishes, when brushing our teeth and other things. We can plant more trees because they take the dirty air and turn it clean. We need to recycle because it is very important for nature. We need to use less light, energy, water. We need to throw away less rubbish because it is the main problem for the pollution of the planet and the environment. Let's be better and more responsible!

Beatriz Aires, Portugal

Hi! In our Art's lesson, we made some posters about the environment. I decided to do about the plastic in the oceans. So I wrote some tips to reduce it: use bamboo or metal straws and give preference to reusable bottles.

I also did an acrostic in English about the plastic!

CHECK IT OUT!

Please, save our planet!
Let's all use reusable bottles
Ah! Reuse that simple boxes you have at home
Straws? Only if they are made of bamboo or metal
Try to eat more fresh food
Iam already recycling
Can you do your part?

Tanya, Bulgaria

Do you know how many plastic garbage is thrown into the

oceans for one year? The answer is 10 MILION TONS!

Do you know how many not degradable trash is thrown in the

land for one year? The answer is more than 200 billion plastic

bottles, 58 billion plastic cups and a billion plastic bags!

Do you know how many trees are cut down for one year?

The answer is 3.5 billion to 7 billion!

And that is really sad, but we have to take action to save our

planet! To save us! These are some thing that we NEED to do:

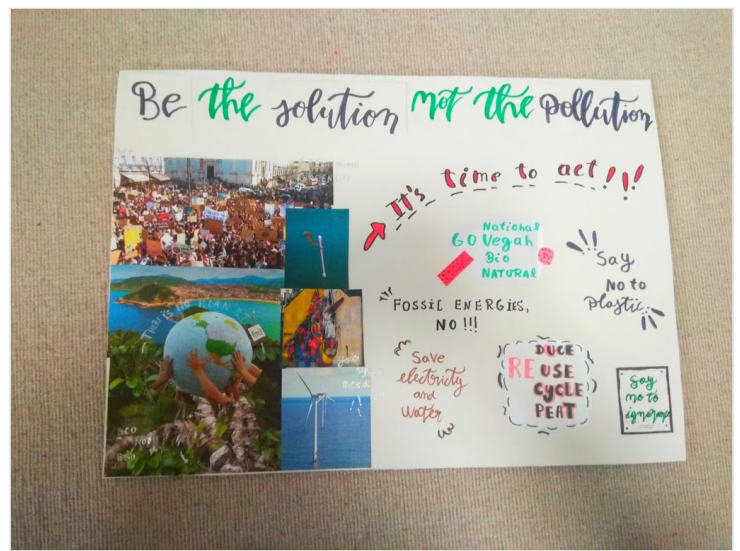

1. Recycles our garbage
2. Don't use so many plastic
3. Plant a tree
4. Drive less
5. Call the rest to help the enviroment! :)

Anita, Portugal

"Be the solution not the pollution!"

IT'S TIME TO ACT!

Beatriz, Portugal

We owe and have to protect the only thing that allows us to have a home, friends, a family, a life, protect what allows us to live.

Thinking of helping our planet starts from home by placing the glasses in its green container, the paper in yellow and the plastic in the blue. separate the trash between these three categories of material, we have to start using less paper for less tree slaughters, refill the glass or plastic bottles again give them " a new life " reusing them . help take care of our planet requires effort and sacrifice but I also want to have a citio to live poor this also made sacrifices and started to reuse paper , so that there are more trees , more trees more oxygen, more clean air to breathe , I left uzar so much plastic and started to graft more than once the same bottle of plastic or glass , I dedicated myself to physical activity and hobbis how to collect garbage lying on the ground by people, we all have to protect our planet, but we can only do it if we do it together. Together for our home, for our planet, to rebuild what we've spoiled make the planet a better place

so we have to protected what is our.

good – ANÔNIMO

Poster about the plastic

Together we can change this problem!

so beautiful – ANÔNIMO

Francisca, Portugal

Each has a position with everything that has happened. Especially global warming. Each of us has to start acting today because tomorrow may be too late. We can start buy using the rule of three rrr: recycle, reuse and reduce. Reduce the amount of plastic in the oceans and even in the terrestre part of the planet, reuse the clothes we have in closets and recycle all kinds of material from the smallest to the biggest thing we have in our home. We have to help the planet, because there isn't planet B. We will try and with much effort everything will be achieved. Let's save our planet Earth.

Egor, Ukraine

Sustentable food is important to our bodys and environment.

We could consider being a vegetarian by a day and try one new vegetarian recipe a week.

Vegetarian Recipes - Veggioke

Whether you're just trying to eat more veggies or are cooking for someone who avoids meat, vegetarian recipes are too good to pass. Veggioke is here to help!

VEGGIOKE

Carolina, Portugal

We must always pick up the garbage that we see on the ground because otherwise this garbage goes to the sea, and this is bad, we must always be careful with the environment because without it the world does not exist. ' Do not throw garbage on the floor.

Peter, Bulgaria

How to save the environment from home? What can we do in these trialing times where we are all forced to stay at home due to the global pandemic currently threatening us? The best things we can do under quarantine would be to stay at home, without going out , as it helps you keep safe as well as helps the environment since we wont be riding vehicles, or throwing as much trash out on the streets as we have done before and others. Another thing would be to start getting more invested into technology and computers, instead of continuing the use of paper, because we are entering a new age of technology, and the sooner we learn it and accept it the easier we will be able keep up with newer generations, as well as reduce the large amount of paper we are using daily. There are many other ways to help the environment even from home, but the best way anyone can help at this moment in time would be to stay at home instead of going out.

Dinis, Portugal

We really need to do a lot to help save our planet. We must take action not only in our home country but all over the world. For instance, we must start by not throwing rubbish onto the ground.

Alexandar, Bulgaria

Protect nature to survive longer!

Martin, Bulgaria

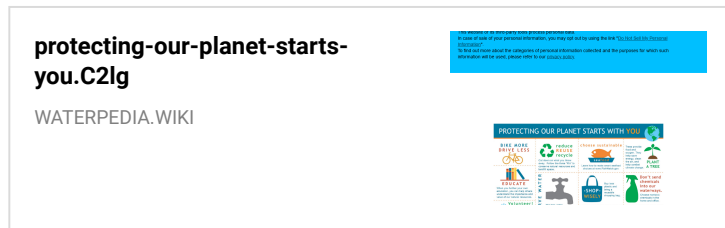

I just want to say SAVE THE EARTH. Have you ever wondered how animals live in this dirty place? Are they die because of us? We have to save our planet for animals, for us, and our heirs. We need to save the Earth. We can change this.

Lera

"The above image was released by the National Oceanic and Atmospheric Administration (U.S Department of Commerce). It shows some ways to protect our planet.

It includes 10 ways of protecting the planet by each member of the planet. It starts with ourselves. we have to bike more and drive less. Educate others about the importance of natural resources. Volunteering ourselves in cleaning the community and protecting our watershed tools"

<https://waterpedia.wiki/>

Sergio

The less water you use, the less runoff and wastewater that eventually end up in the ocean.

Vlad

If we want to save our nature and our planet, we need to recycle everything we can.

Kiryanova Milana

The easiest way that does not require the application of energy in search of opportunities to recycle a thing or reuse it. (free image)

Vicky, Ukraine

What can we do to save our planet? Recycle and take care of the environment. We should focus on green products, recycling programs, solar research.

Olia, Ukraine

Recycling is the process of collecting and processing materials that would otherwise be thrown away as trash and turning them into new products. Recycling can benefit your community and the environment,. So we all must recycle to keep our environment clean and safe!

Nastya, Ukraine

Follow the three "R's reduce, reuse, and recycle and volunteer for cleanups in your community if possible!

Sasha K.

Biodiversity is this process to create a space for humans on the earth, so that not only can human beings survive but also prosper. However, biodiversity is threatened, many of which are the result of our own activities. We destroy biodiversity by spreading cities and expanding them to the suburbs, polluting the atmosphere, moving species from their natural habitat... Protecting biodiversity is an important part of sustainability and we must act now, before it is too late.

Yana, Ukraine

Recycling...

Vanya

Three simple things we can do to help protect the earth: reduce, reuse, and recycle. We must follow the three "R's" to conserve natural resources and landfill space and cut down on what we throw away.

Daniel

Reduce, reuse, recycle!
