WHAT IS GENE?

In biology, a gene (from Greek, meaning generation) is a basic unit of heredity and a sequence of nucleotides in DNA or RNA that encodes the synthesis of a gene product, either RNA or protein.

This is my work.

I hope you will like it.

One of the Endangered Animals, Bald Ibis Birds

It is probably that generations after us cannot see this bird. It was considered sacred in Egypt, is a creature that Noah's Prophet received on his ship in the Flood as a symbol of fertility. It is estimated that they remained 420 in the wild and 1500 in captivity. They are found only in Şanlıurfa Birecik Turkey, in the Nile valley and Morocco in the world. They are monogamous, if their spouse dies, they either kill themselves from starvation or commit suicide by throwing them from the rocks. It is noteworthy that the birds migrated to Birecik on February 14, which is "Valentine's Day". Their generations are running out rapidly. They are bald ibis birds in Birecik District, Şanlıurfa City, Turkey. Bald Ibis Birds.

Zuhall Olgun
Awareness Group

Also known as the silent frog, the Taurus frogs only live in Karagöl, Çiniligöl and Eğrigöl in the Bolkar Mountains in Niğde Turkey in the world. The Taurus frog (*Rana Holtzi*) was found to have lived in the region about 120 years ago and was taken under protection by the Bern Convention. These frogs have no external vocal sacs, they have internal vocal sacs, and they make sound that can be heard from a few meters. Unfortunately; There is also the danger of extinction of this species due to environmental pollution and dynamite fishing. Taurus Frogs. Silent Frogs.
