## RAIN FORESTS

Humans have cut down trees for thousands of years, yet concern over deforestation is fairly recent. The rate at which the forests have been cleared has accelerated during the latter part of the 20th and into the 21st century. Since the end of the Second World War about half the world's rainforest has been felled. Gradually, the rainforest has gained the attention of the worldwide media, making most of us aware of the problems.

(i.e., water quantity and quality) gain the greatest concern, whereas the least attention has been paid to the soil erosion.

optimal management practices can be beneficial to both bioenergy production and environment.
