

## TEACHERS' PETITION DRAFT

**The only thing more expensive than Education is no Education at All!**

**Education is one of the mighty forces, but it cannot be done without resources!**

**One to hear a known fact, education shouldn't have a price tag!**

Education we give reflects the Europe we want, reflects the society and future we want. According to the European Union, better education that leads to less dropout rates and inclusion is one of the five more important targets to be achieved until 2020. One step before 2020, educational systems must be provided with the necessary **resources** by governments, local authorities and international organizations and unions.

As teachers that we participate in the European KA2 Project "Mirror Mirror on the Wall" on the topic of inclusion through active citizenship, we ask the Governments of the European Countries **to increase the percentage of their annual budget for education**. In this way, schools would have more economic resources to be better supported by specialized individuals, buy better equipment and have more time for development, training and differentiation practices. It's only then that inclusion can be achieved and education will serve as the basic pillar of society. Because **"Education is one of the mighty forces, but it cannot be done without resources!"**
