

EUPANTEC-Interview

name: Axel and Yanis

school: LP2I France

1. What was your motivation to take part in the EUPANTEC project?

We would like to meet students from different countries and to work with them on an interesting subject. We also wanted to discover how schools in other countries work on the same things.

We were interested in discovering of a new country and of the Italian's culture.

2. What did you like most regarding the project?

During the mobility we could create new friendships and share things with them. During the free time, we had the opportunity to discover Padua, its monuments, small streets and famous places.

3. What was your most profitable experience?

The most profitable experience was the work in international groups, especially at the end of the week because we knew others and talking with them was easier.

4. How else have you benefited from this project?

We could put into practise the physical theory and do practical activities about it.

5. What do you think of the idea to work in international student groups?

It's really pleasant and interesting because we need to speak in English. It's not always easy but everybody is kind and patient. And everybody brings something into an activity.

6. What would you like to do differently?

Changing students' groups of work during the meeting would allow us to work with other students.

7. Apart from Physics, what other subjects for an Erasmus-Project would you be interested in?

We are interested in subjects related to sciences of engineering and mathematics.
