

"Space Travelers" Project Partner Teacher Evaluation Results

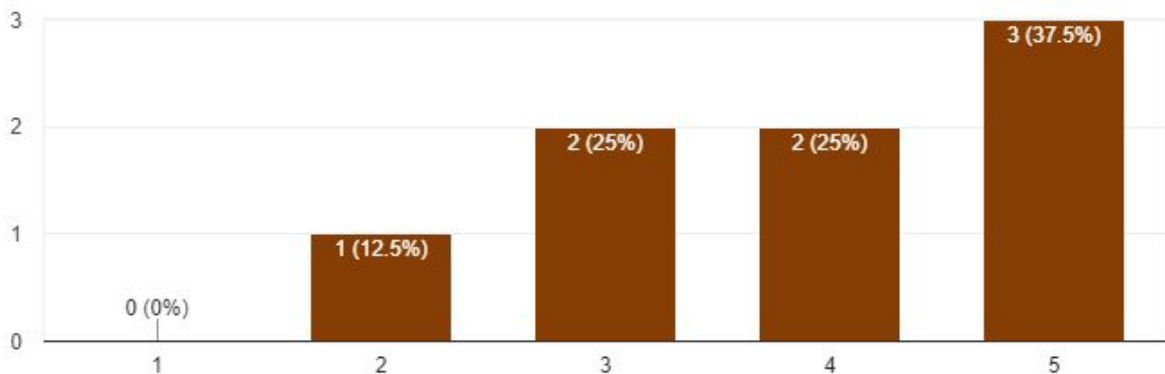

Country

8 responses

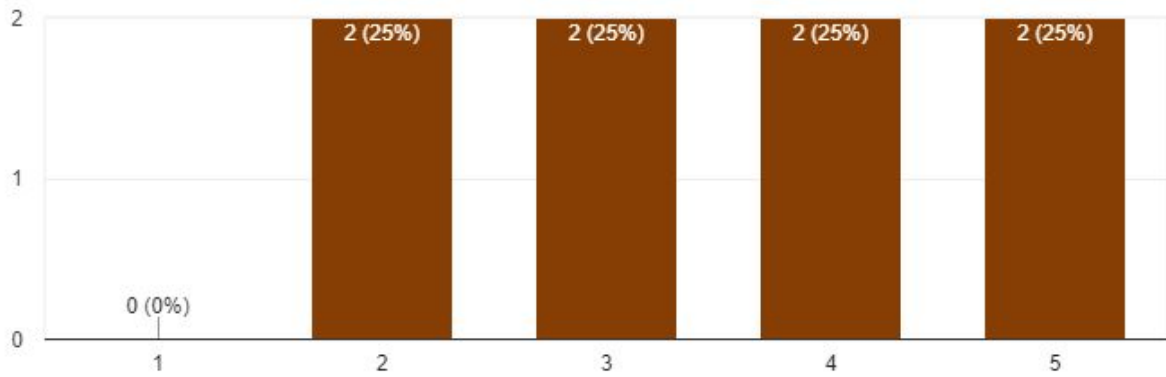

1- Did you have enough information about planets before this project?

8 responses

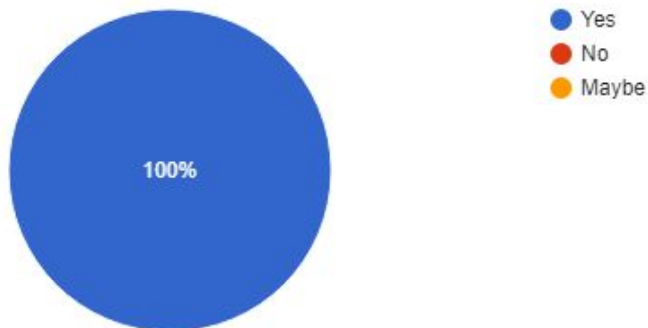

2 - Did you know all web 2.0 tools used in this project, before the project?

8 responses

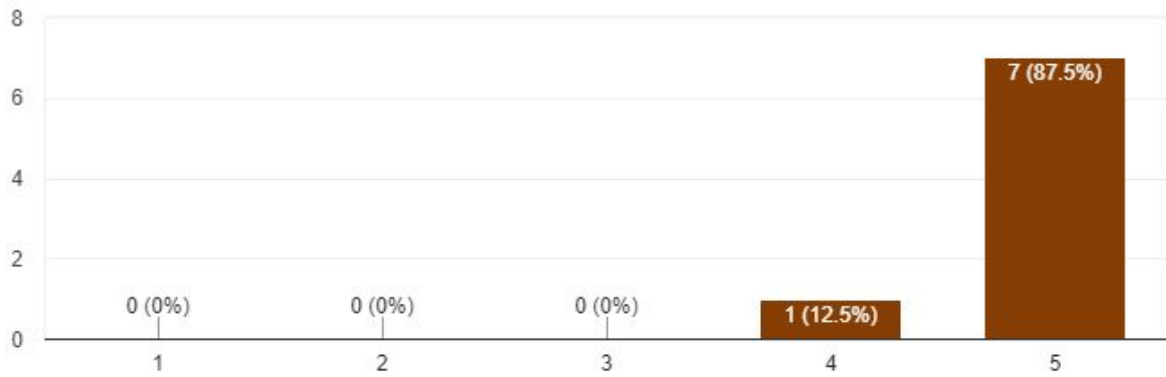

3 - Do you think you improved your project skills with this project?

8 responses

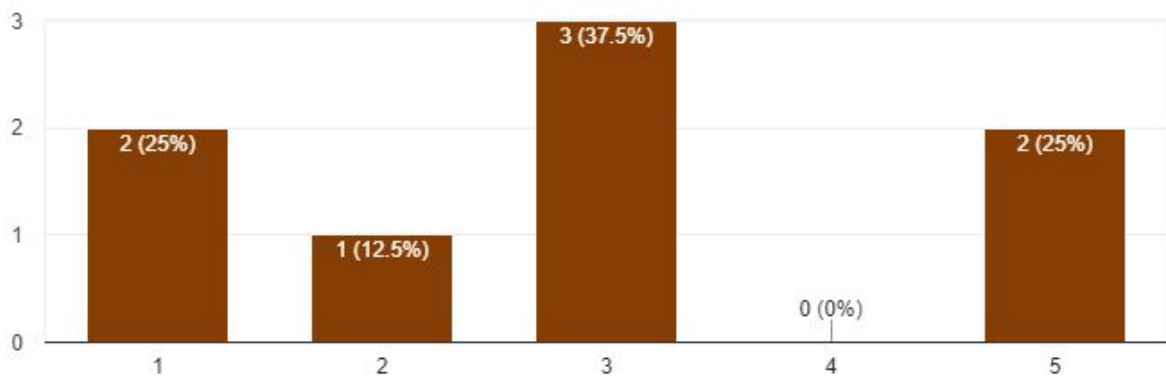

4 - Do you think you well-integrated the project to your class?

8 responses

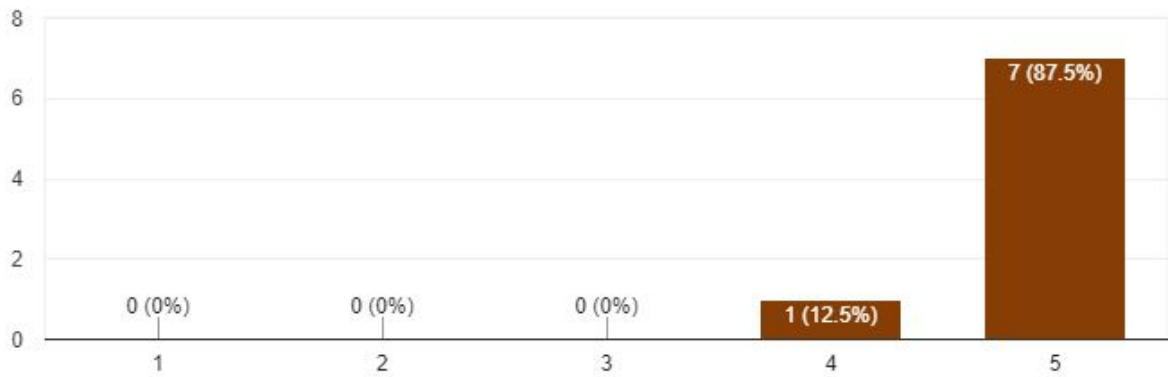

5 - Did your students find it difficult to complete the tasks?

8 responses

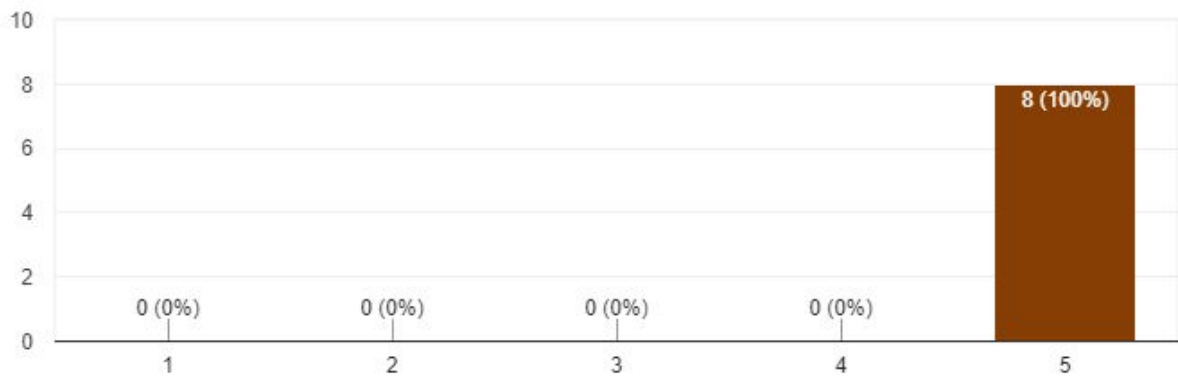

6 - Did you find the project title "Space Travelers" compatible with the works we did?

8 responses

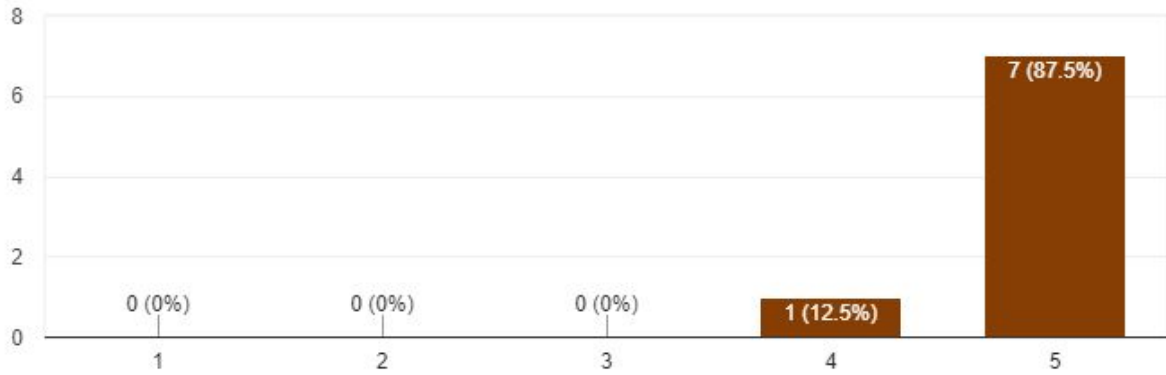

7 - Did you find project plan simple to understand?

8 responses

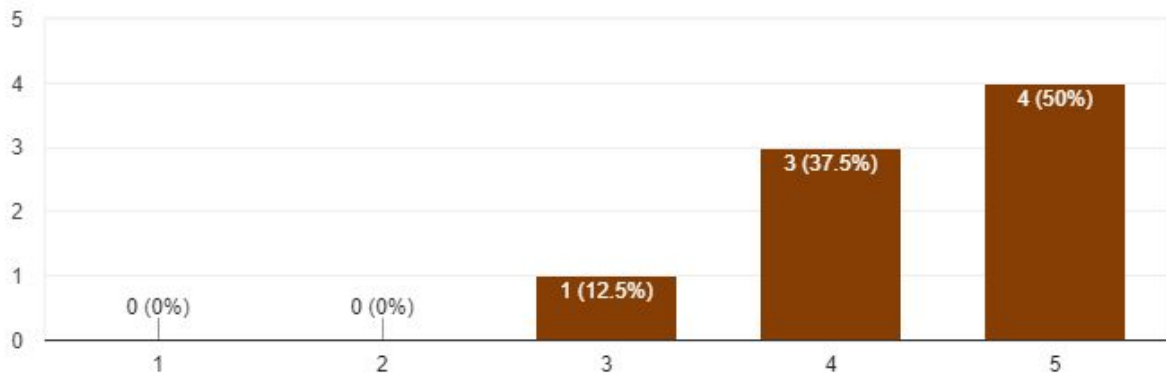

8 - Do you think the number of partners was adequate?

8 responses

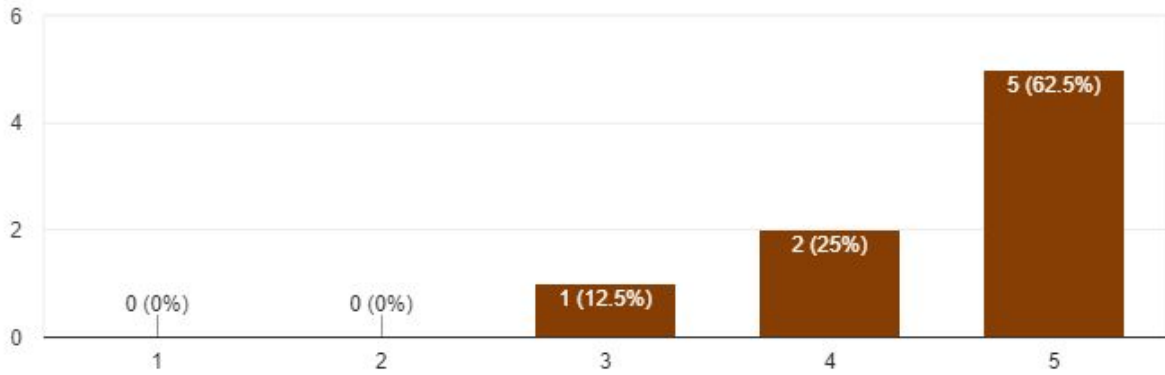

9 - Do you work overload was adequate?

8 responses

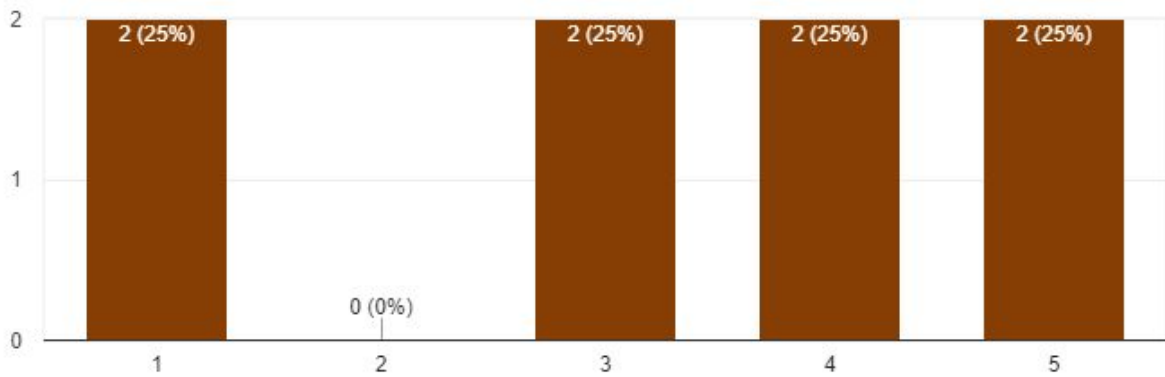

10- Do you think the number online meetings was adequate?

8 responses

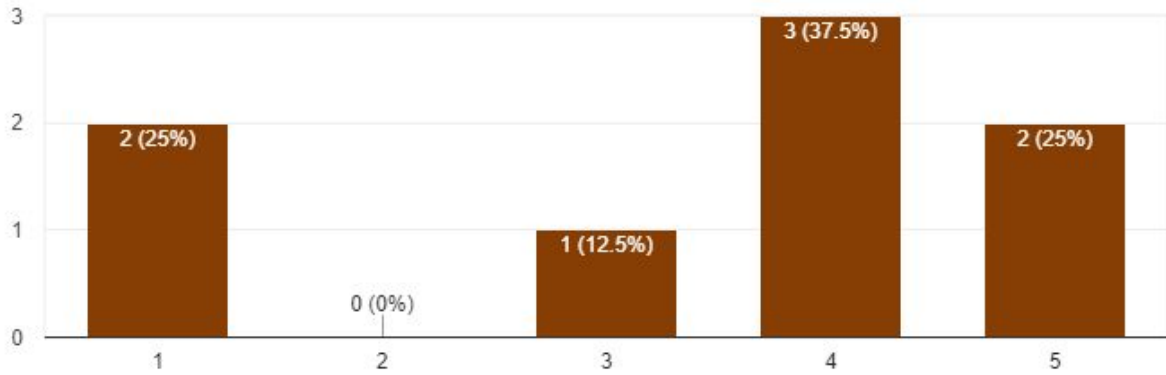

11- Was it hard to create 3-D models with students in the class?

8 responses

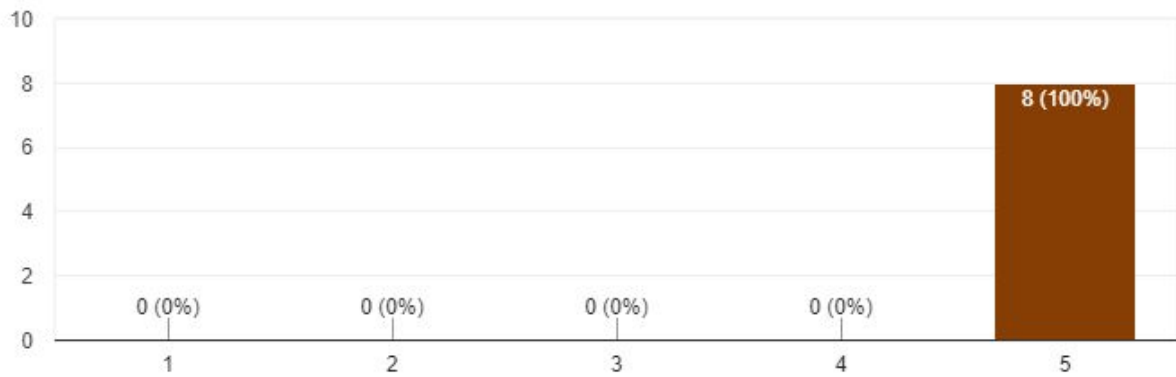

12- Was it hard to create 3-D models with students in the class?

8 responses

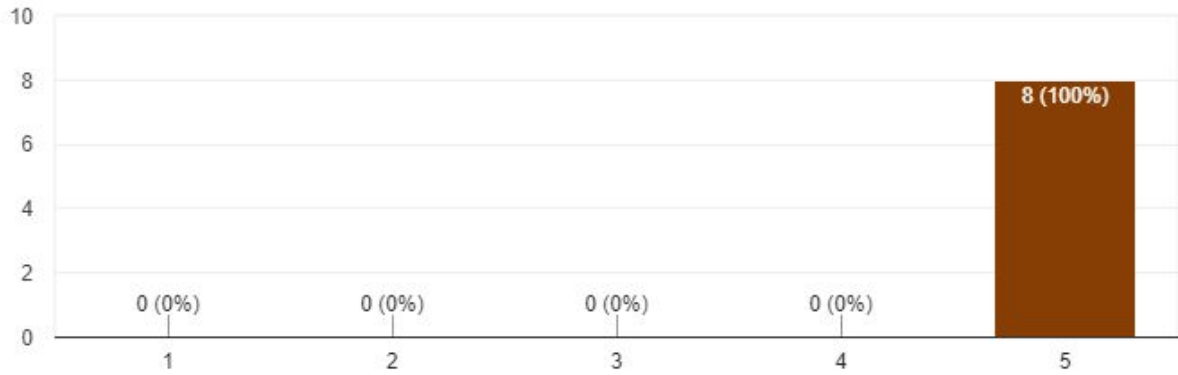

13- Did you find the whole project enjoyable and motivating?

8 responses

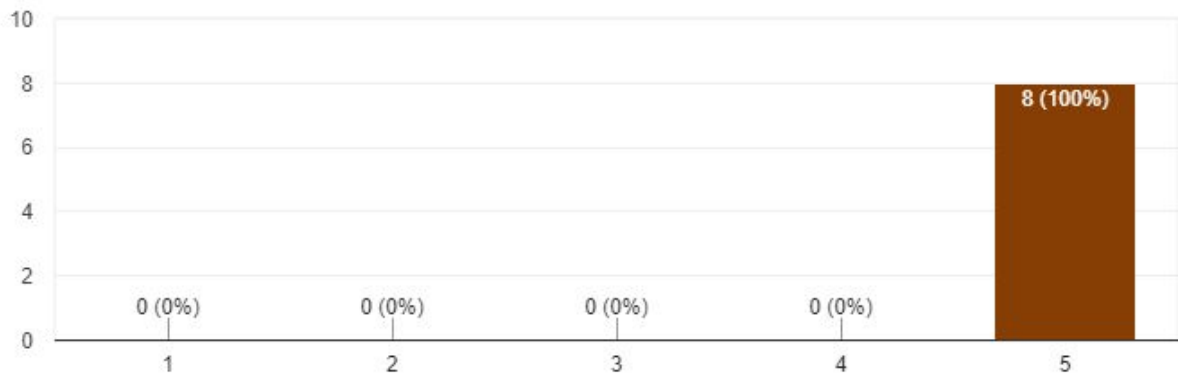

14- Was the guidance and information supplied by the founder adequate?

8 responses

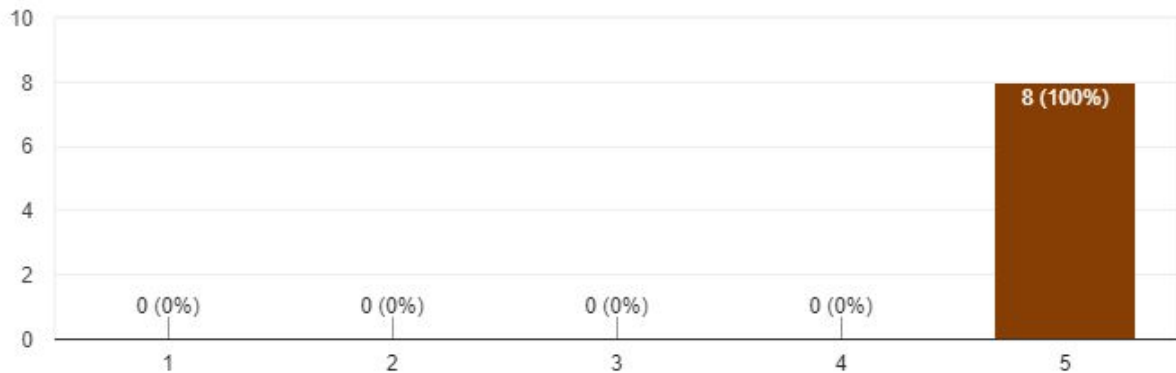

15- Did you find the founder skilled and competent to lead a project?

8 responses

16- Would you think to work with the founder in upcoming projects ?

8 responses

While forming the idea and the project, my major point of view was to present space to students in an enjoyable way. I wanted to make them think that space is accessible and it is only limited with our limits. Moreover, to make them enjoy the whole process through using their imagination world by creating 3-D models. And now, I am wondering how you felt and thought throughout this process :8

- We are very happy to participate in this project. Our founder is skillful, active, energetic, creative, imaginative and guided our work successfully. We enjoy our meeting and working with brilliant partners. I'm sure our students enriched and increased their knowledge about solar system and different planets, learnt new interesting Tools 2.0. The project is interesting, useful, funny, fairy, festive. We are looking forward to collaborate in new projects
- This project has raised my pupils 'motivation and interest...working in groups....creating ...using technology..... have helped their learning....they are excited about all the activities of "Space travelers".
- Students really liked the idea of the project as space is a topic they like. They liked the songs, the games, the artcraft, the meetings, the knowledge they got. It was a different and motivating topic so we all participated happily under the professional and excellent coordination and guidance of the coordinator.

- I like work for this project.I hope.Thank you very much
- thak you very much. this project was wonderful!
- I and my studens learn and fun by this project. Especially my students learn planets,solar system,rockets and they made 3d models. I have chance to make practice about web2 tools. All partners are hardworking and helpful.Şerife Özge YILDIZ is superbly directed the project. It was an excellent project
- When we accepted to cooperate in the project I did not realize that my adolescent students had to work with children of primary school, so immediately after I though it could cause some problems with them. I was wrong they enjoyed th experience very much, they learnt a lot about the solar system and were enthusiastic of the activities and tasks planned. It was clear that creating rockets could be boring for them so I thought to make them realize bookmarks in the shape of a rocket. During the last online meeting they were so enthralled to meet new friends living in other parts of the worlTo d. end up I may say that in planning activities we should always have in mind the target age of our students to plan appropriate activities and that in mixed aged groups it's a must.
- It was fun for me. The students also had a lot of fun.
