

Insect care- Construction of an insect hotel 2020/2021

Action P 19- Manufacture of insect hotels

Insects in our school will feel better because they already have a hotel. We built this place to protect insects that have a hard time surviving the winter.

There will be no limit on the number of visitors to the hotel. The rule "first in time first in law" will be observed. If the rooms are overcrowded, the insects will have to decide for themselves whether they can share the space or whether someone has to leave voluntarily or forcibly. The boom of visitors is expected to be when the weather gets cold.

Action P 19- Manufacture of insect hotels

Different types of insects prefer different materials, so usually in the same insect hotel different options are combined, which aims to provide space for all small inhabitants of the garden. The most commonly used stems are thin types of bamboo, which are very durable and this allows the use of the hotel for years.
