spider

The 3A class students made a terrarium with a spider and studied its place in the ecosystem.

P 20 - creating a terrarium in the classroom with spiders

P 20 - Production of an insectarium presentation sheet

Spider-Man is one of the most popular superheroes, but very few people want to have a real spider in their homes and their cobwebs are only welcome if it's a Halloween decoration. Spiders are not insects, but they are on this list because they are also not very expensive for humans and still play an important role in the ecosystem.

Most species that live with humans are not dangerous or aggressive. They live in habitats where they live and are important to the ecosystem, mainly as enemies of insects and other spiders.

with spiders

without spiders

- ***Spiders are useful animals because they kill pests.***
- ***The venom of most spiders is not dangerous to humans, even the 6-centimeter tarantula.***
- ***Dance was once believed to serve as an antidote, hence the name of the Italian tarantula dance.***
