Hedges are called a number of one or more species of plants, replacing a fence or to serve as a border.

The plants that are used to form hedges are many and give a different look to the home.

Depending on the height hedges are:

High hedge

Medium hedge

Low hedge

Flowering hedges are beautiful.

We also have hedges in our school.

We learn interesting things about them.

We prune to give the hedge the desired shape

We dig, we water  
and we prune the young  
trees we planted last year.

In a few years they will form a beautiful hedge.

The beauty of the blossoming Japanese quinces we take care of makes us happy. We often stay around it and watch the insects that land on it - bees, spiders, locusts, ladybugs. Ants crawl at its roots.
