

ERASMUS+

This round of Erasmus+'s topic was Peer Learning Method. Students of our school participated in with helping younger ones, or pupils with learning difficulties. We were, for example, working on school programmes and helping students from 1st to 5th grade and also our classmates with their homework. We were also helping students in extra classes and I, for started to work in Daily Center as a volunteer for young people , where I offered to everyone who needed it, and it didn't matter if it was homework or just explanation of new topics. I think this method is great because you help others and make experiences that can really help in the future. The pupils raise their self-esteem and develop their learning skills.
