

World Savings Day! – What's your part in it?

What did you save today?

Did you save earth by planting more trees? Or did you go by bicycle to reduce the carbon footprints, thereby saving the earth from pollution? Or did you burn the factory waste to make our mother earth die soon as her atmosphere is polluted?

Coming to plastics! Did you throw the plastics just on the road so that they go into the soil as such?

Are you using the eco-friendly papers, bags, etc?

These are the small steps we can take for greater benefits to the future generations – that is, your grand kids and my grand kids by giving away a better earth to them!

Teach your kids to switch off the switches of electrical generation when not in use!

Did you know that, approximately 30% of energy used in buildings is used inefficiently or unnecessarily! So what are you waiting for?

A unit of electricity saved in each and every home per day can be a great savings of electricity generated!

I'm doing my part

to save energy!

Riding bicycles play a very important role in saving the natural atmosphere and saving electricity! Do you play your part to save these?

And yeah, our next savings is money! Money plays an important role in all our lives. Save a part of your earnings for your future! Just take 10% of your earning and save it.

The most important savings are FOOD savings!

Buy vegetables and fruits which are really essential and you are going to eat it in the forthcoming days. Don't keep the organic foods until it is rotten. But, if you see it has decayed or rotten, please do not throw it away in your dustbins as such.

The decayed and rotten organic substances can be kept in a compost pit – which

eventually becomes a good manure to the plants!

Last but not the least,
Save some time for your family!
I am sure that office works,
promotions, medals, etc is not as
worthy as good memories with
family and friends!

Happy World Savings Day!!! (October 31st) 😊😊😊😊
