

A close-up photograph of several green leaves, likely from a plant like a fern or a similar species, showing detailed vein patterns. The leaves are covered with numerous small, clear water droplets, suggesting a recent rain or dew. The lighting is bright, highlighting the texture and color of the foliage. A dark green horizontal band is overlaid across the middle of the image, containing the title text.

# Nature in Tuscany Italy

hello!

**We are class 2J !**

...and we are proud to show you our fantastic region:

“ Look deep into nature, and  
then you will understand  
everything better”

—Albert Einstein

# Flora

Trees, flowers, plants

## Trees (Tommaso)

The trees are very important for the life of the humans because they produce oxygen for the breathing. In the world there are 60.065 types of trees. The trees live up to 500 years or more. they are very important for the animals because they produce fruits.

## castagno

# Faggio

## Plants (Andrea )

The Plants are part of a kingdom of plants which distinguishes them from the kingdom of vegetables. exemple of plants in Tuscany are:the Cipresso,the Iris or Gaggiuolo,the Ginestra,the Pino Marittimo and the Leccio.there are plants of different colors for example: pink, red, yellow, white ...
