Grain bridge, Žitni most

LJUBLJANA, THE CITY OF BRIDGES

WHICH BRIDGE IS A UNIQUE ARCHITECTURAL GEM OF LJUBLJANA?

The central part of the bridge has stood in its place since 1842.

It replaced an old, strategically important medieval wooden bridge connecting the north-western European lands with south-eastern Europe and the Balkans.

Around 1930, two side bridges, intended for pedestrians were added by a famous Slovene architect Jože Plečnik.

It crosses the river Ljubljanica from Ljubljana's main square.

It is a pedestrian only area and all lit up with lights at night, making for a very pretty scene. (The bridge you are looking for is not among the photos on this page).
