

Measurement of increased Europe competence :

We measure the increase both among **pupils and teachers**. Note : it is not meant to judge the level of pupils and teachers, but to show if the Europe competence has increased.

Which pupils and which teachers :

Pupils : as many pupils as possible that are somehow involved in the project.

Teachers : 1. as many teachers as possible that are somehow involved in the project.

2. a group of teachers, not involved in the project, that can serve as a reference group.

This would be a good way to show the impact of the project in the school (requirements in the application about dissemination, impact etc.)

The instrument we use to measure the increase in Europe competence is the Common Framework for Europe Competence.

The instrument will be used twice this schoolyear 2015-2016, and once at the end of the project in june 2017.

Partners decide themselves wether the measurement will be a self-evaluation by the pupils and the teachers, or a guided measurement, or a measurement based on teachers observations.

Process:

1. The first measurement has to be done before**(to decide in Peterlee)**. After the first measurement each partner will shortly document about the measurement : did you find remarkable things etc. Deadline :**(to decide in Peterlee)**. . The document has to be **sent to ????**
2. The results of the measurement itself are kept by each partner, in order to be able to compare with the results of the second measurement at the end of this schoolyear.
3. The second measurement has to be done before the end of the schoolyear. After the second measurement the partners will compare the results of the 2 measurements and document the status of the Europe competence by graphics : these graphics (The form for the graphics will be designed **by ???**) will show in percents the increase in the domains of Europe competence. Again the status will be documented briefly and sent **to ?????**. Deadline is september 1, 2016
4. The status will be evaluated at the first meeting of the last project year.
5. The same procedure as in 2 will be done before the end of the project **30/06/2017**
6. In the final report the results will be published.
