

## PROJECT SEA PRETASK II

In order to strengthen the links between our two schools we think that it would be interesting to carry out a common action for the climate.

This action should combine several qualities:

- Be innovative for every school
- Be realistic (It is better to look at an accessible goal than to try to revolutionize everything)
- Be preferably sustainable in time, even after the campaign.
- Provide measurable results

Your answers to this questionnaire will allow us to lay the foundations of its organization.

**QUESTION 1:** What actions in favor of the climate have already been carried out in your school?

Pro-climate demonstration in schoolyard  
New biodegradable packaging in the restaurant  
Newsletter to inform on climate issues  
Mobility Week to improve mobility around school  
Rainwater cisterns, solar panels, automated lighting  
Waste sorting  
Big Sweater Day (One day a year when the heating is turned down)

**QUESTION 2:** From an ecological point of view, what are the two most important elements to improve in your school?

Recycle and avoid waste  
Remove dispensers (too much plastic)  
Improving air quality in classrooms  
Improve traffic around the school  
Reduce paper use  
Improve the heating system  
Reducing food waste

## PROJECT SEA PRETASK II

**QUESTION 3:** Last but not least, what action would you take to help improve these points? Be careful, your action must meet the criteria stated above.

Placing special bins for food leftovers

Install flow restrictors on the valves

Remove the beverage dispensers

Installing air pollution analyzers

Do not take any snacks, drinks or other objects with packaging (prefer bottles, bulk).

Improve mobility around the school (more buses for example)

Study the possibility of replacing paper by computerised means.

**QUESTION 4:** Do you have any comments on this task?
