Climate of Kırkkale, Turkey (Central Anatolia Region)

Kırkkale has a cold semi-arid climate which means winters are cold and snowy, summers are hot and dry. Rainfall happens mostly during the Spring and Autumn. May is the wet month, the coldest month is January with an average maximum temperature of 4°C. August is the driest month and July is the sunniest one. The warmest months are July and August. It is possible to say that people should visit Kırkkale especially in May and September which have good weather with pleasant average temperatures between 20°C and 25°C. However, it is important to add that in the last years we have been experiencing some extreme changes in weather and climate. For example, the weather sometimes becomes so cold in summer months and unexpected storms occur when the weather is warm. In winter months like February and March, the weather becomes so hot as if we were in June or July. The trees start to bloom flowers. After these hot days, snow starts unexpectedly. (This week 23-24 March 2021, we are experiencing this example).
