

Desislava Bangieva's personal portfolio

I will talk about ...

1. Who am I ?
2. My hobbies and interests
3. School and extracurricular activities
4. What I have done so far
5. What I learned from Erasmus +
6. What I expect from my visit to Portugal

Hello! I'm Desislava Bangieva

I was born in the small town of Galabovo and I am 17 years old, but I study and live in the town of Haskovo. I am proud to say that I am a student at High School of Natural Sciences and Mathematics "Acad. Boyan Petkanchin" because we are one big and cohesive family.

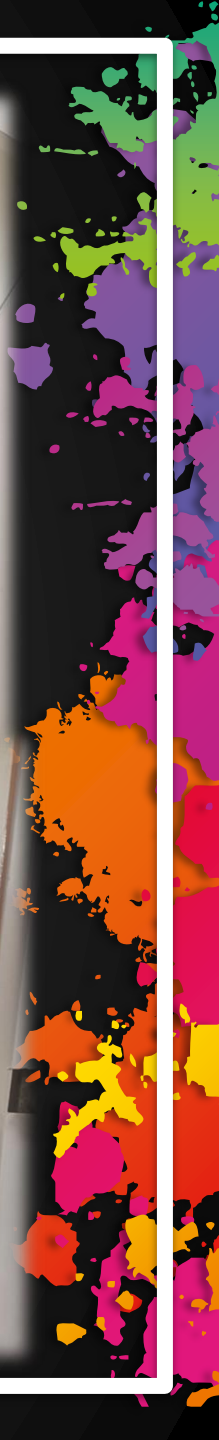

My hobbies and interests

- ❖ I like to spend time with my friends and have fun with them because we are party-people

❖ I have been doing fitness for almost 2 years now and this is one of my hobbies

❖ I like to prepare my food at home and eat healthy

I love spending time with my family and relatives

SLIDESMANIA.COM

I love to travel around our country because there are many beautiful places that are worth seeing

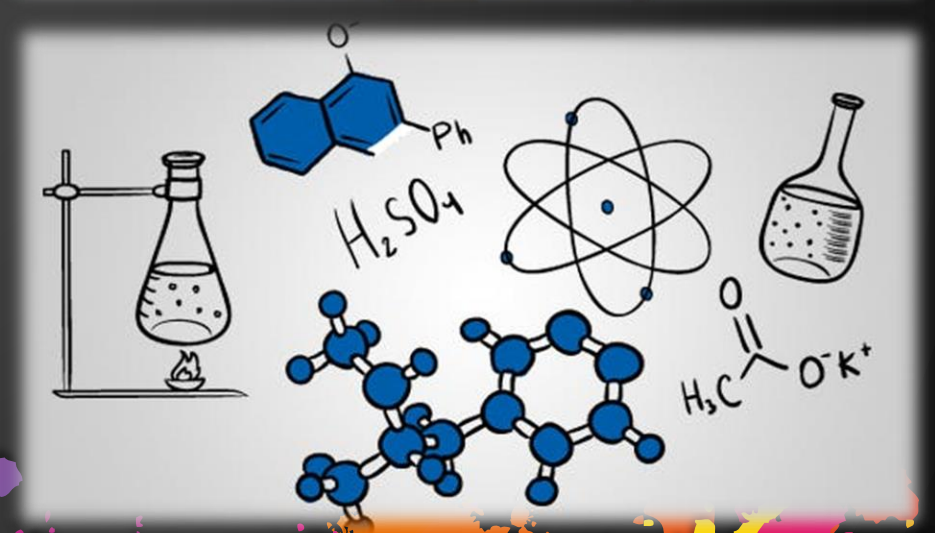

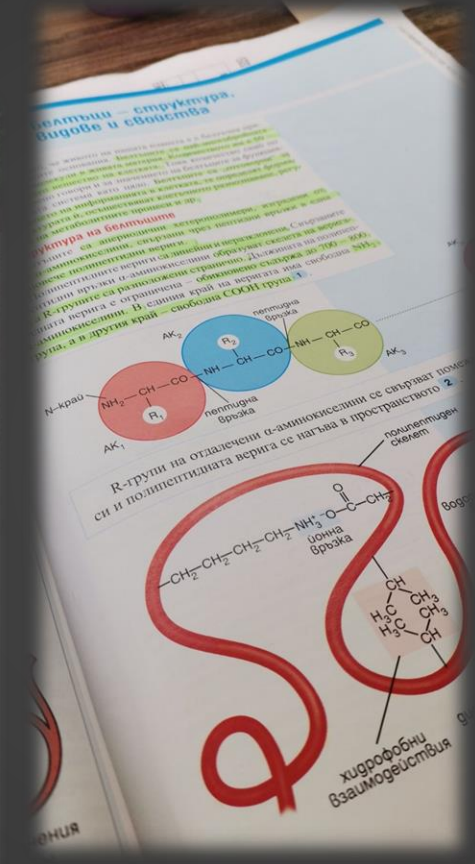

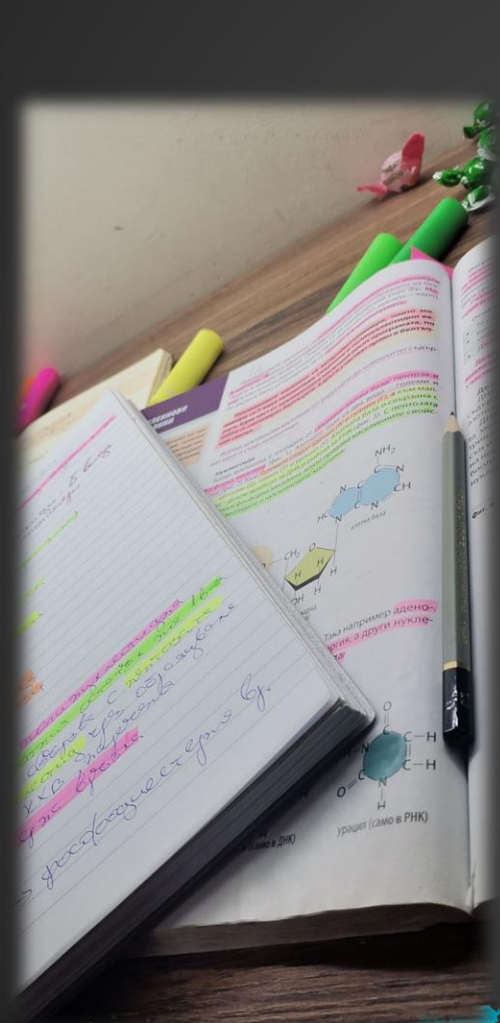

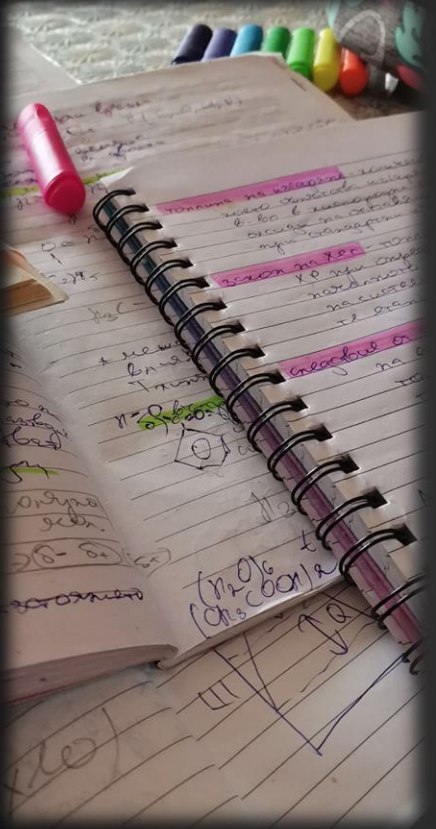

In my free time I do handicraft

SLIDESMANIA.COM

I am interested in chemistry and biology and I want to study medicine

School and extracurricular activities

My classmates and I actively participate in all events organized at the school and in the municipality

SLIDESMANIA.COM

What I have done so far?

❖ I made 4 presentations, 1 digital book and 1 poster

4.1 In this presentation, we look in detail at the threats to biodiversity resulting from human activity

- Harmful gases from cars
- Pollution with waste
- Road construction
- Poaching
- Change in riverbeds

4.2 In this presentation I present the types of ecological groups of plants: Mesophytes - these are plants adapted to an adequate or medium water supply.

1. Мезофити

- Това са растения, които растат в обикновено средни условия. Мезофитите са наземните растения, които срещаме ежедневно. Те са адаптирани към адекватно или средно снабдяване с вода. И също така те са в състояние да живеят в средни температурни условия.

Листопадно дърво

Xerophytes - these are plants adapted to survive in extremely limited water supply.

2. Ксерофити

- Това са растенията, които живеят в сухи местообитания. Те са пригодени да оцеляват при изключително ограничено водоснабдяване.

4.3 In the next presentation we look at the Protected Site "Burgas Salt Pans"

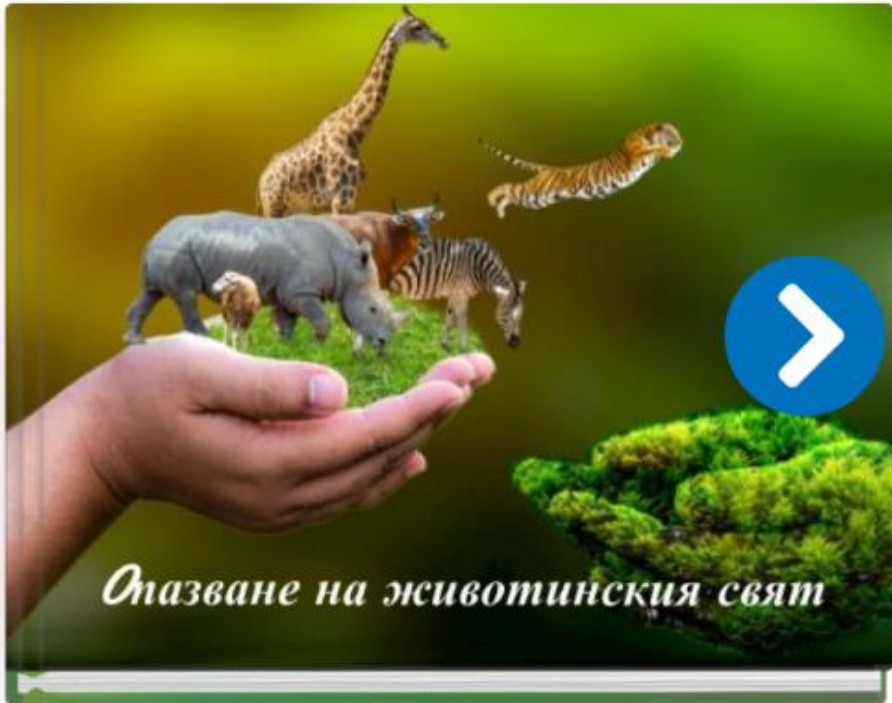

Благодаря ви за отделеното време!

4.4 In the presentation about Atanasovsko Lake we look at its habitat, species of plants and animals, salt production and healing mud

4.5 My digital book is about conserving wildlife

1. Селскостопански животни

Директива от 1998 г. установява общи стандарти за защита на всички животни, отглеждани за производство на храни, вълна, кожени изделия или за други селскостопански цели. Директивата обхваща и рибите, земноводните и влечугите и се основава на Европейската конвенция за защита на животните.

Правилата на ЕС за защита на животните отразяват т.нар.

"пет свободи":

Свобода от глад и жажда
Свобода от дискомфорт
Свобода от болка, нараняване и заболявания
Свобода да изразяват естествено си поведение
Свобода от страх и стрес

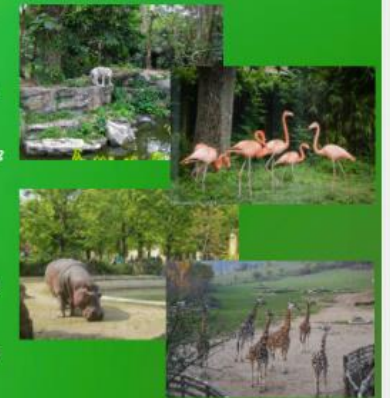

Зоологически градини

Правилата на ЕС за отглеждане на диви животни в зоологически градини утвърждават ролята на зоопарковете в опазването на биоразнообразието и налагат стандарти за защита, включително за настъпяване на животните по подходящ начин.

Китовите и делфините са защитени от улов и убиване във води на ЕС. Регламент на ЕС забранява търговията с продукти от тюлени.

4.6 The poster is about nature conservation

What I learned from Erasmus+

By participating in the project I met new people, I learned to be even more organized and responsible and I learned to work in a team.

What I expect from my visit to Portugal?

I expect to learn a lot of interesting things and meet new people
