

### **DAY 3: VISIT TO THE UNIVERSITY (DELTA CENTER) AND WORKING ON THE PROJECT**

We started the day having breakfast at the hotel and then went to the Delta Center, inside the University of Tartu, to work on our project.

When we arrived there, we received a lecture about its history and its way of functioning, that can be summarized in 5 main ideas: it belongs to Tartu's University (here there are some subjects that are taught like robotics or mathematics). In Delta Center each student can organize the subjects as they prefer depending on their time. The building has been built gradually. Studying there is totally free and it is also a place where startups have been created, having arrived 10 of them at a value of more than 1 billion euros.

Later, we ate for lunch a typical Estonian dish: potatoes with chicken and a sweet strawberries or chocolate mousse dessert. Later, we started to work with a university teacher about the problems we needed to solve, starting with delimiting the characteristics of our customer and making a brainstorm about the possible solutions.

To end up, we visited an old soviet factory that nowadays has some shops and restaurants so we decided to have dinner in one of them.
