

Monday, 17.2.20

On the first day the teachers introduced our assignment for the next few days to us. Then the Finnish students taught us some Finnish, which was a lot of fun, but also really hard. Later they showed us who was gonna be in which group and then we went to our team leaders and got to know the Tampere.Finland application. We looked for stuff the application was lacking and things that needed to be improved.

Tuesday, 18.2.20

On Tuesday we went to Tampere to listen to some presentations about public transportation, how the air is composed and related stuff. We were able to try different technologies that can be installed in any house to check the air quality or you can view a whole room and look for possible problems without even being there. Then we had time to get started on the project, we summarized our ideas to get a first idea of what we were gonna do the following days and what aspects we wanted to focus on.

Wednesday, 19.2.20

Finally, on Wednesday we started working on our assignment, which was to find improvements for the Tampere.Finland application. We took the mind map we created the day before and started working on the ideas and at the same time still looking for new ones.

Thursday, 20.2.20

Thursday was the final day for our assignment. We finished our presentation and talked through it a couple of times. Then a little later we went to the gym where all the groups presented their ideas for the Tampere.Finland application. Two men from the company that designed the application were there to give us feedback right away, which was great because they actually want to use some of the ideas the groups had.
