

PREVIOUS ACTIVITIES TO CARRY OUT THE DEBATE ON RENEWABLE AND NON-RENEWABLE ENERGIES.

In the area of Natural Sciences, the concepts of renewable energies were being explained. Later, it was extended to the Spanish Language area seeking information on the use of renewable energies. From all the information we collected, a dossier was prepared on the advantages and disadvantages of the use of renewable energies. At this point it was decided to carry out a debate in which the students were positioned for or against.

The students had a few days to find out about their presentation in this debate. In addition, it was suggested that they make banners in which they developed their main idea of the debate.

On the day of the debate, the following activities were carried out:

1. Presentation of arguments in favor.
2. Exposition of arguments against.
3. Discussion between teams.
4. Members of the different teams drew conclusions.
