

# Your laptop weighs a ton!

Every newly manufactured laptop generates waste that consumers never see.

Waste footprint

## 1200 kg

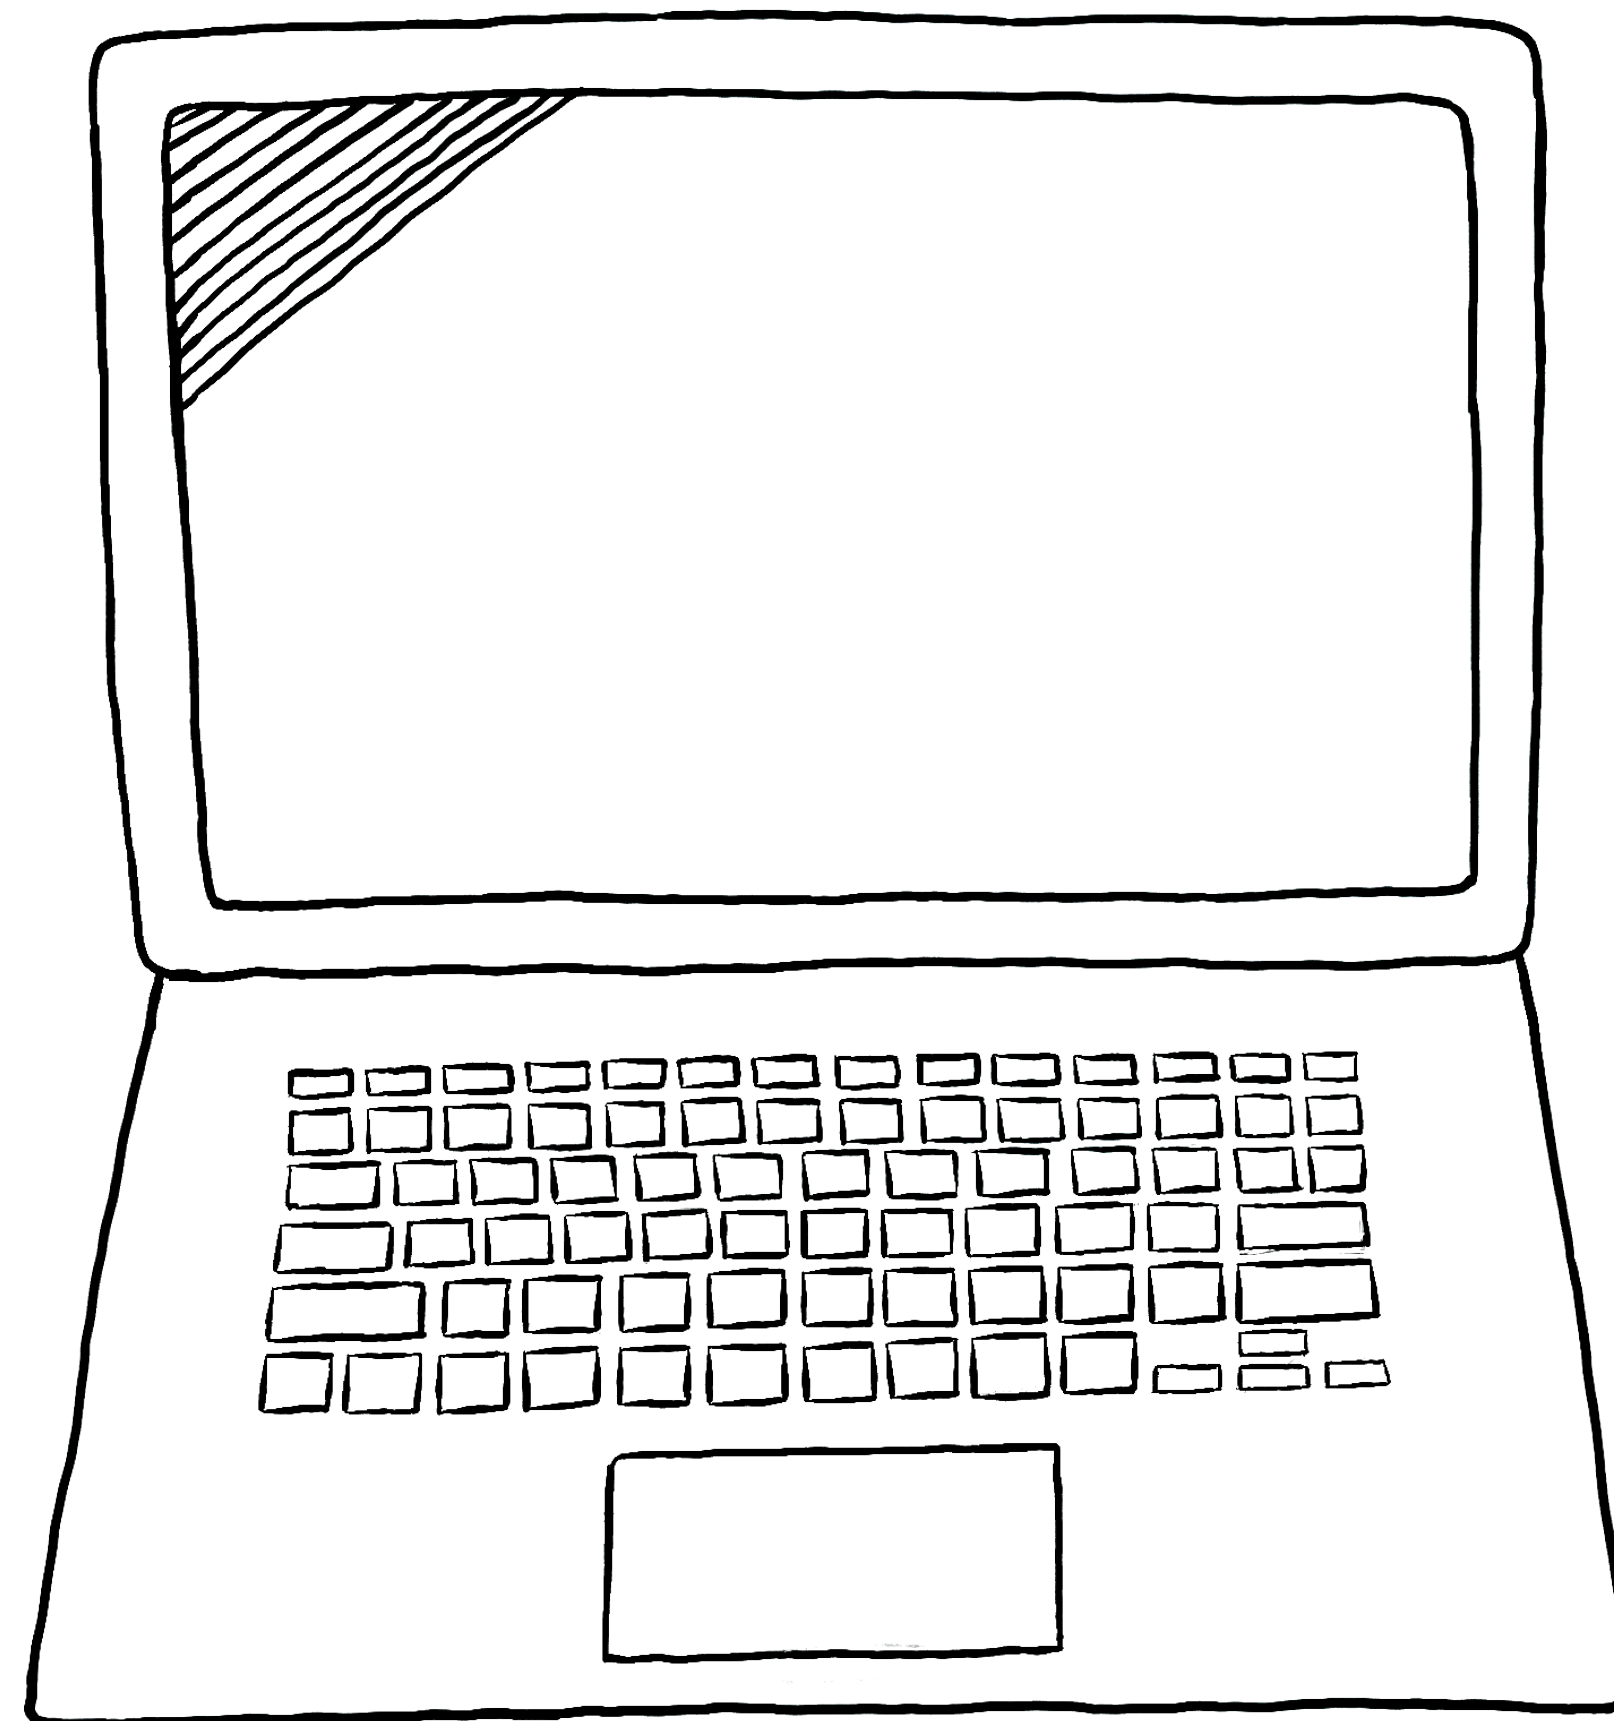

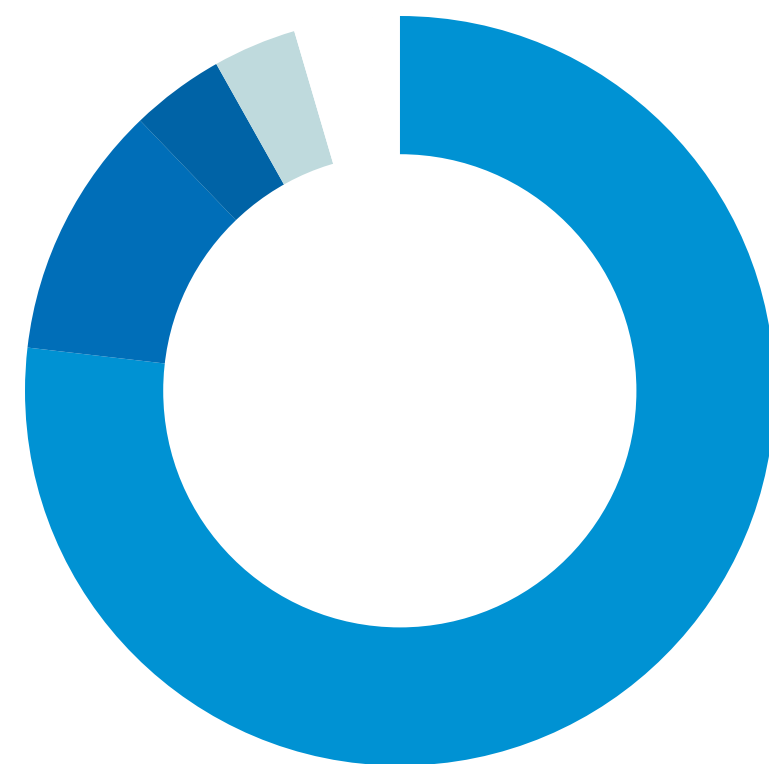

## 210 kg

Climate cost

28,35 €

Waste sources:

- Printed Circuit Board (PCB) 77 %
- CD-ROM / DVD-ROM unit 4,9 %
- Other 4,6 %
- LCD module 10 %
- Cables, connectors and adapter 3,5 %

It happened again! After three years, your laptop started giving problems. It seems you need a new one but even only thinking about it makes you feel very heavy.

Here is what you can do for the **EWWR**:

- Launch an eco-design challenge
- Set up a Repair Café

**Take a look at this case study!**
