

CLIMATE REFUGEES

ETWINNING PROJECT:

"CLIMATE CHANGE IS A POLITICAL CHOICE"

DESCRIPTION

The term "climate refugee" has become a shortcut for the entire issue of climate-linked migration. Two huge debates currently rage about the phrase: first, exactly who counts as a climate refugee?; and how many climate refugees will there be?

CAUSES

Global warming affects the livelihoods of more and more people sometimes to such an extent that they have to leave their homes either temporarily or permanently, becoming environmental refugees.

CONSEQUENCES

Many country will end because climate change and the world economy badly affected. Refugees will go border country. Maybe the border country's people do not want this so maybe there will be civil war. Also inequality in the world will increase. More people will die from migrants and we will say that I wish we had a better look at the world but will be past in future.

Many countries are flooded and their economies will be badly affected. Many people will have no home, no food, and perhaps no place to live.

SOLUTIONS

- 1) We should know value of the world,
- 2) We should not waste natural resource
- 3) We should use vehicles that can be recharged instead of gasoline vehicles
- 4) We shouldn't consume too much meat, we should instead consume vegetables
- 5) We must raise awareness of the situation
