

Dear [@Name]

This letter is something I write because it's a school project. The task I was given was to explain and describe how Selbu, or maybe even Norway in general was in 2014. This is because we'll make a time capsule that we'll bury and hopefully someone will find it in 100 years or so. My first task was to shortly describe myself though, so here we go.

My name is Even Evjen, and I come from Selbu, Norway. I was born on the 5th of January in 1999, which means I'm 15 years old. My hobbies are quite simply golf. Golf is a sport that is mostly about getting the ball into a small hole with a wide range of clubs in your arsenal. Some people might say that this arsenal is poorly selected, mainly due to problems by getting their ball into the hole themselves! I'm quite a good golf player and I'm applying to a golf college next year. I also like playing volleyball, not to brag or anything, but I'm pretty good. Something else I like to do might be walking my dog. Since I like to walk with my dog that means I must have a dog, right? Well yes, I have a dog. Her name is Enya. She's born on the 21th of June and she's seven years old. She's a grey cairn terrier.

I like to watch films and of course I like to play FIFA on the PlayStation, In case you don't know what a PlayStation is, it's a gaming consol. And then again, if you don't know what FIFA it's pretty much a soccer/football game. Like pretty much everyone else I like to listen to music, mostly on Spotify, which is a music program online that you can use to listen on music for free. The thing about this is that you stream the music, there's no download. I don't really have any favourite songs or artists, and I pretty much listen to every genre there is, although jazz and blues might not be what I listen to much. Local music is something that's really popular in Selbu as well, and a well-known band from Selbu is Ole Bjarnes. Their music is very popular in our little community.

Since I'm 15 years old I still go to school. At the moment I'm a student in the 10th grade at Selbu Ungdomsskole. My favourite subjects in school are probably gymnastics and science, and I don't really despise math either. Of course it's not everything that I like, but mostly it's possible to get through the days without problems.

For now Norway is a cold place, but this summer was an extremely hot one, and it seems to be a pattern in "good" summers. It seems to be 17 years between every "good" summer. We have a lot of snow in the winter, which is a relief to many, but also a tragedy to some, including me. I don't really like the winter, but I'll manage through.

Best regards

Even Evjen

SELBU UNGDOMSSKOLE
