

Dear friend from the future,

I am writing this letter to describe to you how the 21st A.D. century looks like.

My name is Aimilios Pavlidis and currently I am Junior High School student.

In my free time I practice martial arts and various sports. I am very serious about my future and I learn two foreign languages, German and English. Also I am practicing TAE-KWON-DO for the last 9 years and three months ago I started basketball training. I am a very busy person for my age. As a result I do not have enough free time in order to be able to play or go out with my friends...

I figured out that as I progress my studies further my responsibilities are increasing and I am more and more stressed. Sometimes I see my friends playing on the streets without all these worries and I feel sad since I can't do the same. However, as I grow older, I realize that through these studies I will become a better person and I will be awarded with a good job in the future.

When I grow up, I want to be an astrophysicist. I know that it is a weird job, but I would like to study the planets and search for signs of life in our galaxy. I might have been influenced by the movies that I usually watch. Most children usually watch children films or funny comedies that make them laugh. However, I enjoy watching more scientific films, such as the Apollo 13, the Galaxy and others. My dream is to be a good man and be well respected.

I am feeling bad whenever I realize that most people are so simpleminded. They do not seem to care enough about the environment. They do not use the means of public transportation and they throw their litter anywhere. These were the words I wanted to tell you. The only thing that I want is to make you a question: Do humans evolved in the future and discovered life in other planets?

Aimilios Pavlidis
