LESSON PLAN

Form: 7th

Subject: IT

Teacher: Mirena Maljković

Topic of the lesson: Photomontage for the photo story

Objectives of the lesson: Students will make photomontage using computers and Adobe photoshop to create a photo story with children from our school as main characters .

List of required material:

Computer, internet browser, application for processing photos, original photos of " the hero" of the photo story

Process of the lesson: teaching and learning activities

Activities during the lesson were organized using different methods such as guided discussion, group work and students' research.

First, we talked about the floods that took place in Croatia in 2014. Students found out that the area in Gunja and around it was the most affected one. Then the students got the task to research what kind of actions Croatian citizens took in the flooded areas. They also had to find photos of Gunja on the internet before and after the flood. Pupils made photos to simulate the real actions and events in Gunja for the purpose of making the photo story.

Students were divided into four groups and they had to make a photo story about Danijel and his friends who helped in Gunja. They had to combine photos of themselves and photos from the internet so that the photomontage would make a convincing story.
