Training for teachers after visiting Lithuania

At the end of January our linguistic teachers took part in the training concerning different methods and activities that we saw during our mobility in Lithuania. The most interesting thing turned out to be interactive cubes "iMO" and the presentation of their usage in the classroom. Our teachers were also interested in using "Bee Bot" robot in the classroom which uses coding and programming.

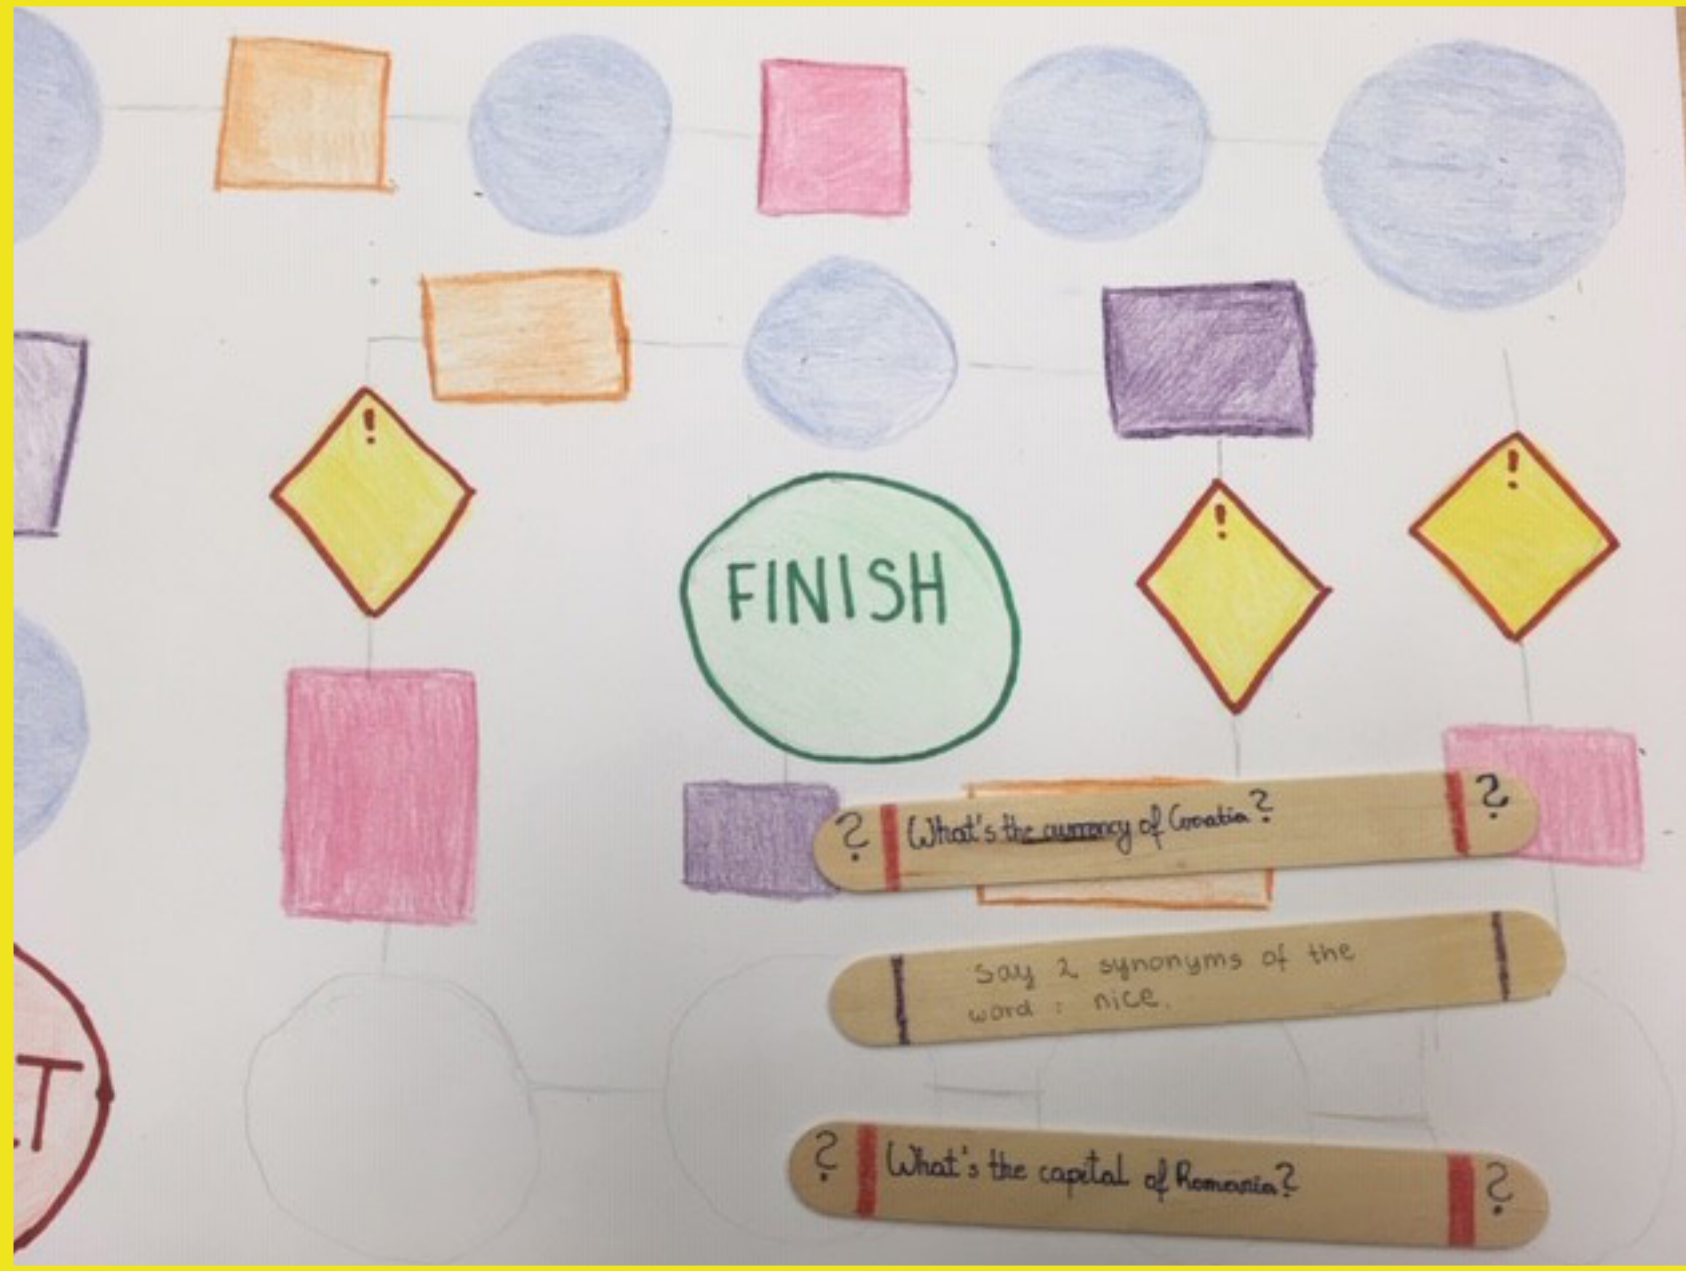

Board game

Students created a board game using different materials. They made a colourful board and made some questions up. The questions concern cultural information about our partners as well as typical grammar and vocabulary issues in English language. You use the dice and some counters (that the students made themselves) to move on the board. Every field has different colour and on that depends the question.

FINISH

? What's the currency of Croatia? ?

Say 2 synonyms of the word: nice.

? What's the capital of Romania? ?
