Hello!

My name is Tina and I am Italian. I'm forty years old and I was born in Cosenza, a city in the South of Italy. I live in Corigliano Calabro, a nice city next the sea.
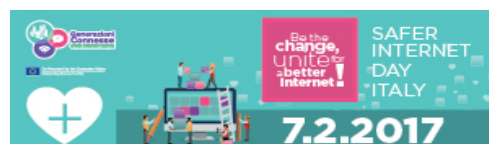

I have a daughter, Erica; she's twelve years old and she's studing in a secondary school.

I have lots of hobbies: reading, cooking, playing the guitar, technology and travelling. I spend much time to study and improve my skills and my English for my job and myself. I have been working as an Italian teacher for twelve years. I've been working in a Secondary school for three years: its name is "Vincenzo Tieri". I love my work and my students because I love challenges, learning new things and experimenting with new situations. In my school I am a " Digital Entertainer " and I deal with educational activities involving computational thinking as " Code week" , " Olympics Problem Solving " and web security for teenagers.

As Digital Entertainer I organize some web events, as Europe Code Week (european week for computational thinking and unplugged Coding) as you can see in these photos;

Safer internet Day (days dedicated to internet security and privacy, sometime in collaboration with postal police who meet our students in the school);

Olympics Problem Solving, (Individual logic games and teams)

Hour of Code with support of www.programmailfuturo.it and Code.org
