

Protection of the Earth

The Earth needs protection every day.

Here are a few tips to save the Earth:

- Transform your clothes old items, in short, whatever you don't use at home.
- Every plastic bag you buy from the market pollutes the environment more. You can prevent this pollution by choosing cloth bags instead.
- Save water, you should wash your dishes in the machine, not by hand.
- Turn off and plug out electric and electronic devices when not in use.
- Use household waste to make compost.
- Clean up rivers and beach.
- Using energy efficient light bulbs and economical washing programs, running washing machines and dishwashers at full load reduces electricity consumption.
