

SAFE ONLINE 5 TIPS

1 Do not share your password with your friends. Your password is yours alone.

2 Think carefully before you put information online. You can't just delete it afterwards.

3 Bullying is not something you do, including online.

4 Don't believe everything you read, see or hear online. Some information is also made up, called fake news.

5 Watch out for fake profiles on social media. Only become friends with people you have already seen in real life.

Extra tip: Make a passphrase instead of a password. It's more secure and easier to remember.

How much time do you spend online? Don't forget that there are many fun things to do besides gaming, social media, YouTube and other apps. So divide your free time smartly!
