The visits of the week !

Wednesday : olive day... and other fruit and vegetables!

At 1 pm, all the foreign students and their hosts took the bus to go to Mouriès near Arles.

First, we saw the plantations of organic fruit and vegetables of « le jardin maraîcher ». The owners and producers, Simon and his girlfriend, explained to us all the things they organized to take care of their organic products, like the water supply and the crop rotation.

Then, we went to an olive grove and, with a kind of big comb, we brought down the olives into a net, which was on the ground, to be able to collect them. Everybody enjoyed this moment, even the teachers !

Next, we visited an olive mill. The owner showed us the current mill and the former one. We saw all the machines, old or new, and it was really interesting. We finally went back to Arles at 5 pm.

We learned a lot of things during this afternoon and had a great time.

Friday : Montmajour at Longomaï farm.

miam-images.centerblog.net/rub-legumes-varies

On Friday we visited the Longomaï estate which is a local producer of organic food, vegetables and meat.

In the morning, we defined the word sustainability all together. We had a picnic with the teachers and some of us played futsal. Then in the afternoon a guy called Matthieu explained to us the breeding of sheep and we visited the plantations. Furthermore, the group explored the greenhouses with vegetables and citrus. Their sizes were so huge that it was so impressive!

Article Tanguy et Youssra : enjoying experimental workshops

For the second day of the week, foreign students and STL class worked on the molecular cuisine with Mrs. Hydrio.

We made two «recipes» a jelly kind of food in different forms, for example stars and mushrooms and a long spaghetti. It was a lot of fun and tasty !

Then, we made a lemon flavoured foam which we ate with the jelly food. It was an amazing experiment to do, and we enjoyed it even more with the foreign students!

To be continued...

Status report

This project was very instructive and interesting.

We could realise how important sustainability is and its true meaning, specially nowadays, with all the pollution and all. We principally talked about food waste, I think we are all more careful after that. It also has made us see how non organic food eating could be bad for our health.

We have met amazing people, from 4 different countries, Italy, Belgium, Spain and Germany. It was a great week and most of us have improved quite a lot in English. A very good experience to do again and again.
