

## Gabrielle's analysis of our results to the question:

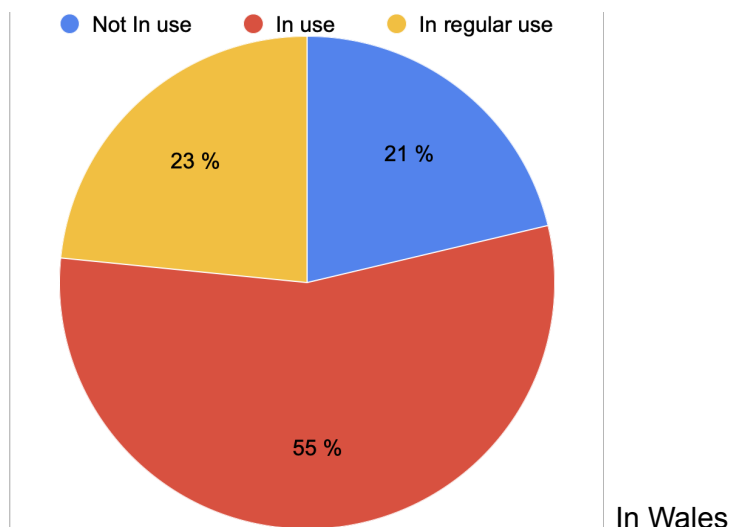

### Do you save water?

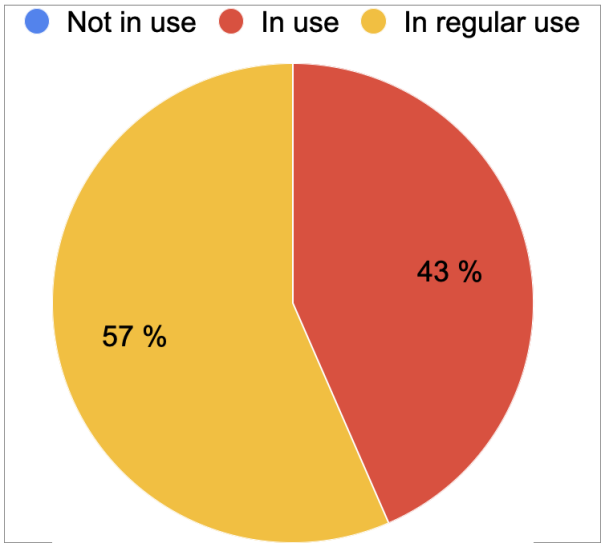

We asked this question to students in Wales, Spain, Finland, Portugal and Reunion Island as part of the project Erasmus.

Nowadays, we are more and more conscious about the dangerous impact that we have on the environment. It is possible that if we continue to live normally we will end up with a depletion of resources such as water, for example. Water pollution is a serious threat to the world's water. Microbes, salts, and pollution from agriculture and industry all contribute to the problem. Global warming will likely have major impacts on the world's freshwater resources.

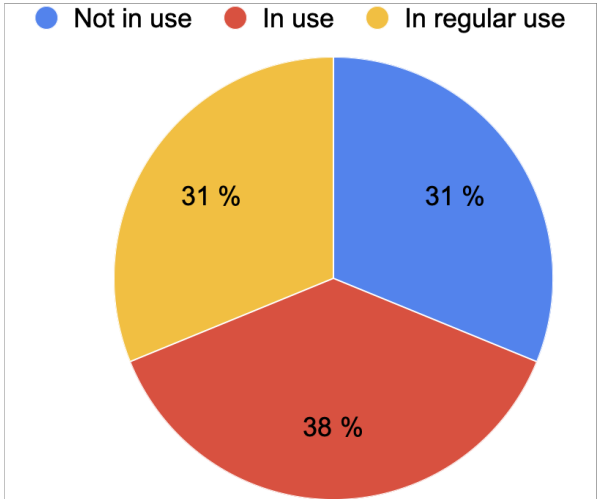

Clean freshwater is an essential ingredient for a healthy human life, but according to experts, 1.1 billion people lack access to water and 2.7 billion experience water rarity at least one month a year. By 2025, two-thirds of the world's population may be facing water shortages.

Conserving household water use is an easy way to live more sustainably. It's interesting to know what young people think about it. They are the one which will suffer the most from it.

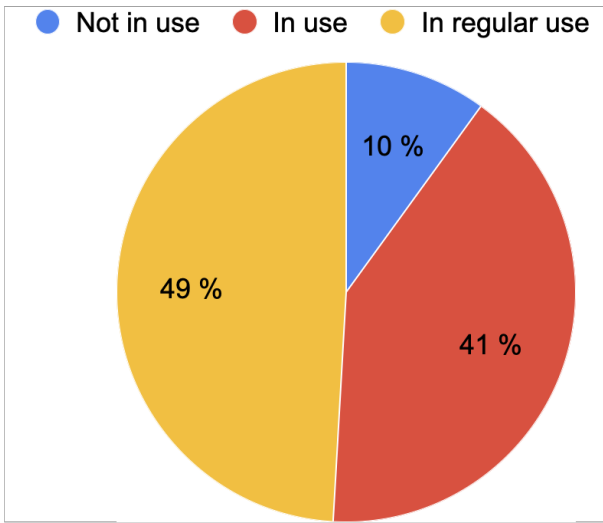

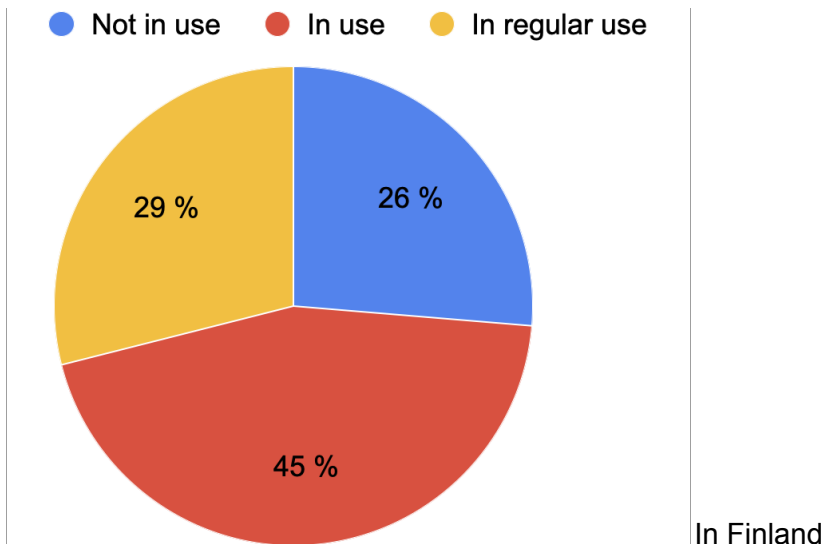

In Spain

In Reunion Island

In Portugal

According to this poll, we can say that in general saving water is kind of a common thing for students. The answers: in use + in regular use, creates the biggest part on every graph which means that they seem to be aware of what it means to consume a lot of water at home and try to prevent it. There are some regional differences, for example in Spain everybody considers saving water but in Reunion Island we have more people than in every country of the project who think that they don't really save water (31%). It means that young people are not sensitized in the same way all around the world and I think that everybody must know the impact of their action on the environment. We also know that according to experts, the Scandinavian countries such as Finland are expected to achieve the SDG's first. I consider that in Reunion Island people don't really talk about it, and it's not as big as in other countries.
