

The environment has been affected negatively due to climate change. Its impacts on us and the environment are awful such as melting ice, high temperatures and extreme weather conditions. Yes, people have managed to make some changes in order to save the problem but that is not enough! You can save it! The future generation with all the new technology can manage to save the planet by planning recycling programmes or finding new eco-friendly fuel or even abandoning some kind of products that are bad for the environment. We are counting on you to find a better way to keep our planet safe and beautiful. We all believe in you and hope for the best!
