

During technical education classes, 6 grade student Lana Božić (on the left) and Emina Maksimović (on the right) revised how to use two trigons and marking of numeric values.

Emina has forgotten how to draw parallel and vertical lines with two trigons and asked Lana to help her.

Lana said that she was very glad to have helped Emina and revised the drawing techniques herself as well. On the other hand, Emina reported that Lana has helped her a lot. Emina was also glad she could ask a classmate for help instead the teacher.
