

Environmental problems in Belgium...

Problems that are currently much discussed in Belgium

- Excessive paving (of driveways, front yards...) leads to flooding danger.
- Agricultural emissions threaten water and air.

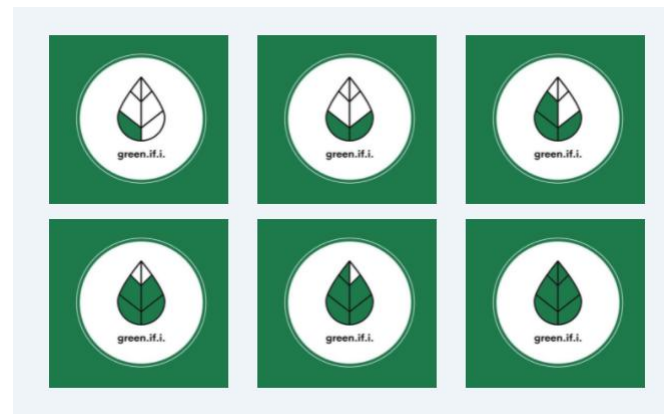

During the meeting in Belgium, we will introduce the topics of the project.

CLIMATE CHANGE and:

- Forests and environment
- (Food) waste
- Biological agriculture
- Water and pollution
- Waste

Moreover... we will

TAKE ACTION!

Our environmental group at school:

- The green beavers
- Through small actions, the Green Beavers promote an environmentally friendly school. They are a group of enthusiastic pupils and teachers who encourage all schoolmembers to take care of the environment.
