

Environmental problems in Manlleu and its area

There are two main environmental problems in our area:

- Pollution of the waters
- Pollution of the air

Pollution of the waters:

- Underground waters are polluted because of intensive farming activity - there are a lot of pig farms in our area. We can't not drink the water from springs.

Pollution of the air:

- Sometimes - especially in summer - we have high concentrations of ozone in the air.
- It is said that we have pollution because of the air from Barcelona moving to our area. On certain occasions suspended particles and also in benzoapyrine are found in the air.

Our environmental group at school:

- For our green.if.i. project we have created an environmental group called the green serpents. Because of the virus we haven't been able to do many things, but hope to be working along with you.
