

## THE SALT-PANS: FAUNA, PLANTS AND SALT

On February 17, 2022 our VI - IX class students were all active in various workshops dealing with topics that the Erasmus+ project deals with.

They all started the day by watching an introductory video about the Sečovlje salt-pans in Slovenia and answered a kahoot quiz about it.

<https://www.facebook.com/watch/?v=3957085137704595>

Later they worked in different workshops:

**THE 6th CLASSES** learnt about the salt-pan fauna by watching a ppt presentation, reading the leaflets done by our Ciceroni, and revised the names of the animals by playing MEMORY, CARD GAME (matching pairs) in GROUPS and compared their characteristics by playing CARDS in PAIRS (CHALLENGE). After that they solved PROBLEMS (Rebus) and used their creativity to produce PUZZLES and make REBUSES with pictures of the animals.

**The 7th CLASS** learnt about the uses of SALT in the kitchen and elsewhere. Then they made a RECIPE BOOK entitled "RECIPES from the SALT-PANS" by using google docs.

**The 8th CLASSES** learnt:

- about the work of the SALT-WORKERS, made some posters and a PUPPET of the salt-workers, and
- about the FLORA of the salt-pans and presented the halophyte plants as Cicerones to the others.

The 8 and 9th class students made experiments with salt in the science lab to see the characteristics of salt (making crystals) and its use in practical life (on icy roads).

Finally, **the 9th class** students made some DRAWINGS of salt-pan FAUNA and FLORA in black paint and contrasted it with the background colours and shapes of the salt-pans.
