

## **Be Aware!**

We have all heard the news about how climate change is causing ice polar caps to melt..

The main issue here is that the sea level is rising, causing many lands to flood.

More than the loss of habitats, climate change is causing health issues in all beings, and we barely have enough trees to clean our air.

## **Every individual has an impact**

### **How are you using your impact on Earth?**

Every action is valid, as long as you avoid the bad ones.

From smoking to driving a car, gas emission is one of the main harms we do to our planet. Try riding your bike to school, separate the rubbish, switch off the lights...

A small change in our daily lives could change the world, if you already know what to do, do not forget to share it with your friends and family.

## **In this week's interview:**

I: Why have you decided to join the C.C.A. Campaign?

X: I joined it because I want to learn more about other countries, and help with climate change, and want to do my bit to help the world.
