## Air quality in Bydgoszcz

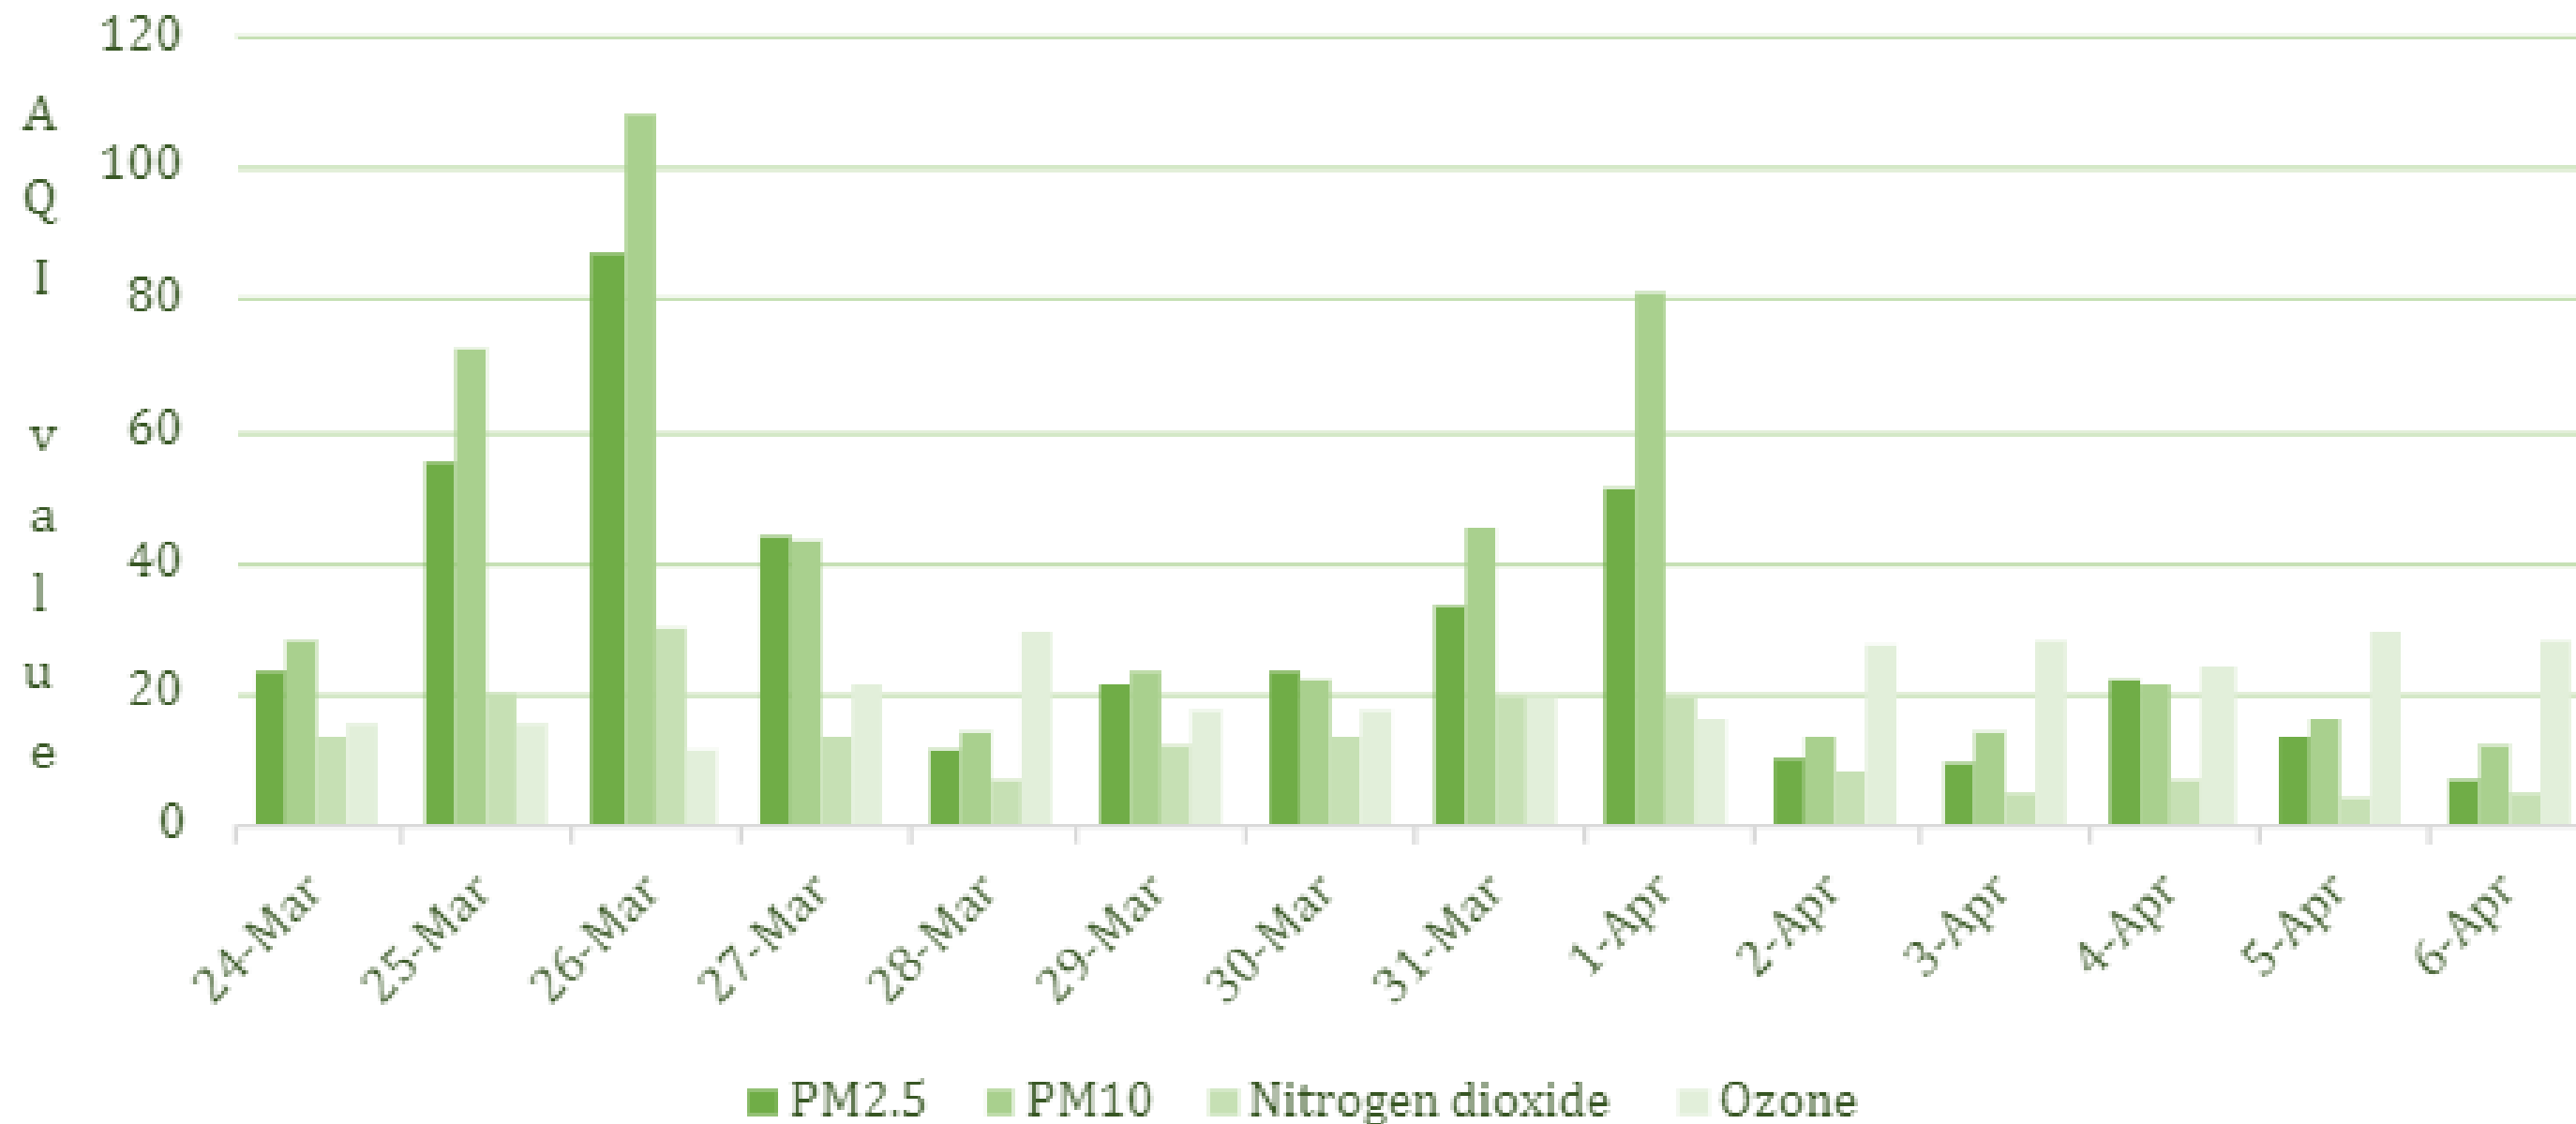

## Conclusions

The air quality gets worse on Fridays and one day before Easter. Probably due to CO2 emissions from cars.

## Main pollutants

---

## Conclusions

As you can see in this picture the amount of dusts (PM10 and PM2,5) is commensurate with the number of cars on our streets. It means that even electric cars are not fully eco-friendly, because they increase the amount of dusts flying in the air. We can reduce it by using public transport or choosing, for example, a bike.

## Conclusions

The amount of ozone in the air is bigger on warmer days.
