

## Evaluation summary of teachers mobility to Jurmala

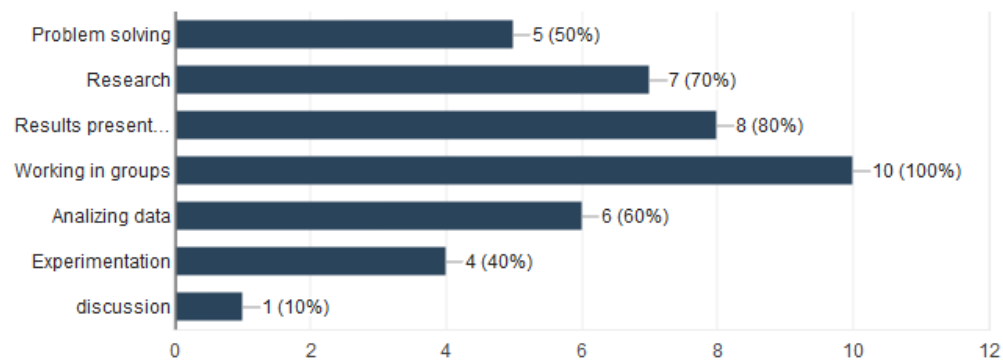

### 3. Inquiry based learning is:

10 atbildes

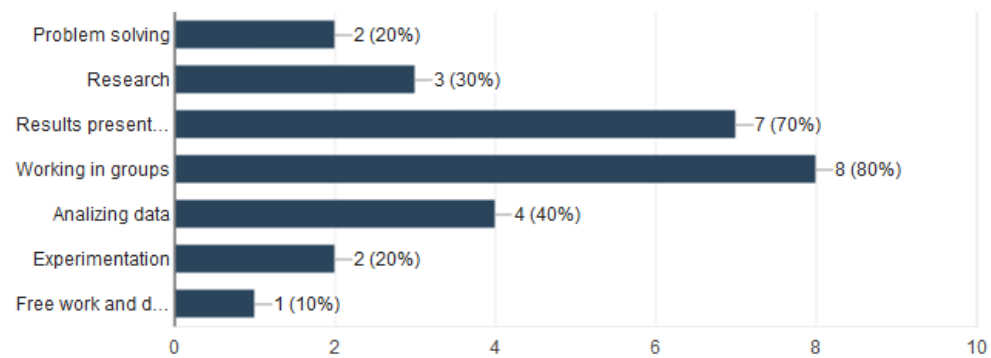

### 4. Which of these steps did You see in the lessons?

10 atbildes

### 5. Which of these steps You used in Your lessons in Latvia

10 atbildes

## 6. What new inferences did you gain during the mobility?

10 atbildes

I am now convinced that students should work in a more autonomous manner, it is certainly more beneficial for their learning process. EBL is a sure way to get students more involved and therefore make learning more meaningful to them.

IBM is very good for students. It has huge influence on students motivation to work as well as better memorizing the material.

Class management.

Very good experiences and learning about different ways of teaching. Especially using the combination of several strategies in the same lesson.

Inquiry based learning is the perfect method to be applied not only in natural science but in language teaching as well. I learned that it is important to formulate the instructions/tasks precisely in order to obtain good results.

Experimentation

I am very close to your open relationship with students and to implementation of IBL in science and even social science subjects. At national level, I enjoyed free afternoon art and sports activities, as well as awareness of the importance of education and investing in it.

A new conclusion was that the students were very good when analyzing the data

- The success of changing learning methods depends on many circumstance: number of teachers involved, ...
- I see that we have really good conditions at your school, that we already do many things right, but that we can improve in some areas

the way to discipline students during lessons

## 7. What will You try out in your work at school ?

10 atbildes

Since EBL is what really got my attention, I am now very interested in applying this method in my classes more often.

I'll try to do some IBM during English lesson as well as encourage other teachers to use this method during their subjects.

Pupils will make videos based on different goals.

More often working in groups and the method Inquiry based learning.

I am determined to use IBL in language teaching and in social studies. My colleague in the English department and I will develop appropriate role card for IBL in grades 7-10.

the physical experiments

IBL method in chemistry and science.

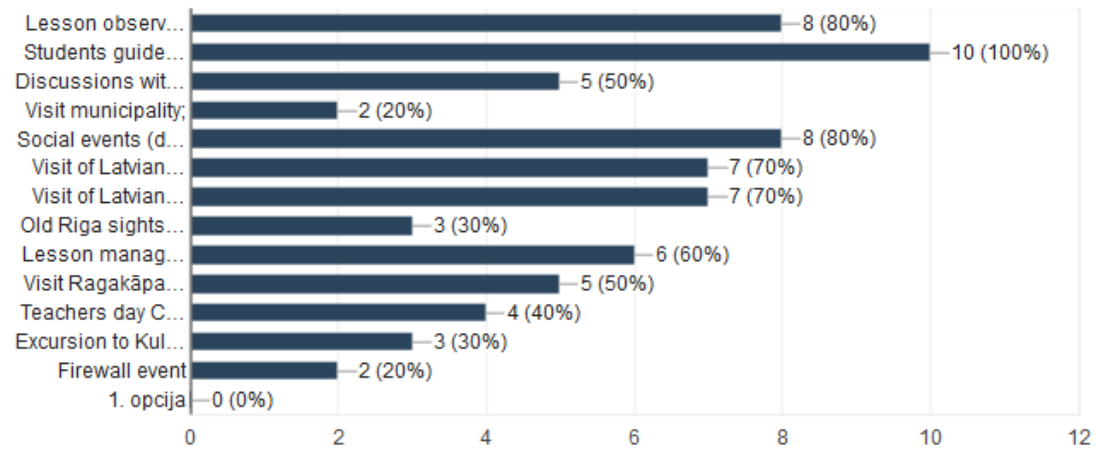

More analyzing

i will do more experimentation, that is something we don't really do enough especially in the higher classes.

research, group work, result presentation

## 8. The most beneficial activities during the mobility were (please, five most beneficial)

10 atbildes

## 9. How focused was Mobility programm ?

10 atbildes
