

Sustainability – what does it mean and how can we act to make our planet more sustainable? **TASKs:**

1. Fill in the gaps. You can find the missing information on the posters on the wall. But watch out! There is always one person who writes and all the others take turns running for the words. There are three rules that need to be followed:

- <u>Leave your worksheet at your table</u>. This way you will have to memorize the words you are looking for and you will learn them easily.
- You are only allowed to look up <u>one gap</u> per run.
- You are not allowed to speak any language accept for **English**

The group who is ready first AND has the correct answer has won.

2. After that make <u>3 questions</u> about the worksheet. You will ask them the other groups.

Sustainability=	, stability/lifecycle of the planet, people and profit.		
WHY? Every sustainable resor	urce usage has to:		
1. Help the present generation's needs			
2 future generation's needs			
	development: other purposes), respect and	, use as long as possible, promote and	
WHEN? The term was created by during the Conference on Environment and Development in Brazil in, also known as the Earth Summit.			
WHAT? The resources do not only include ecology and environment, but also (people). culture and economic resources (monev)

		WHAT CAN WE DO? Buy products from local shops	

Sustainability – what does it mean and how can we act to make our planet more sustainable?

Sustainability= balance of resources, stability/lifecycle of the planet, people and profit.

WHY? Every sustainable resource usage has to:

1. Help the present generation's needs

2. Not compromise future generation's needs

2 D'II

HOW? Means of sustainable development: distribute fairly, use as long as possible, reuse/recreate (use again for other purposes), respect and promote human rights and diversity

WHEN? The term was created by the United Nations during the Conference on Environment and Development in Brazil in 1992, also known as the Earth Summit.

WHAT? The resources do not only include ecology and environment, but also human resources (people), culture and economic resources (money)

.

3 Pillars of sustainable development:		
PEOPLE: social/cultural pillar	PLANET: ecological pillar	PROFIT: economical pillar
- Meeting the people`s needs	Protect (conserve, recreate, clean) the environment	Fair distribution of resources and wealth= equity
satisfaction of basic human needs	including water, air, land Reduce stressors (greenhouse	Efficient usage of resources:
