

RECYCLE

What is recycling?

Why is it important to all of us?

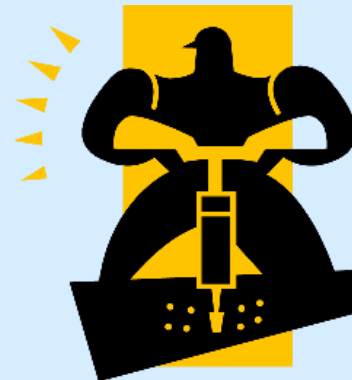

Definition

- **To recycle:** to treat or process used materials or waste so we can use these materials again
- This stops us from wasting useful materials

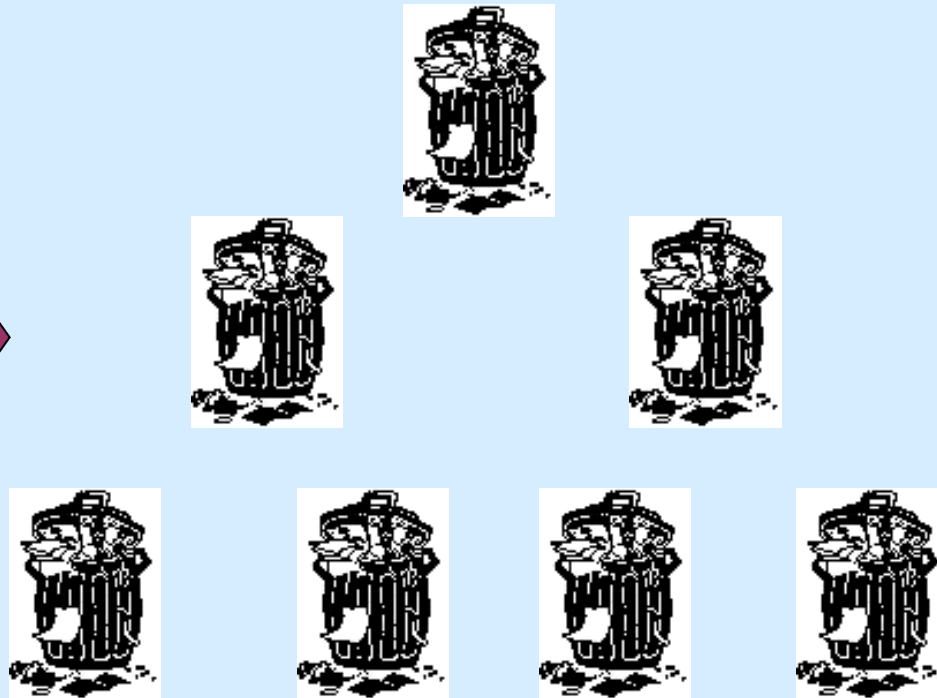

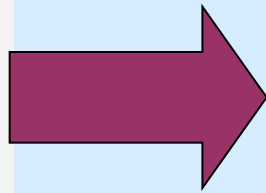

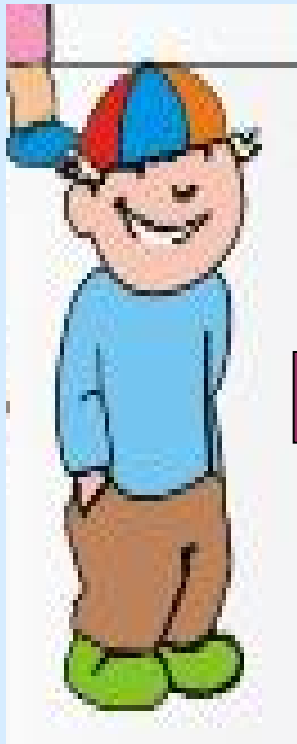

Where does garbage occur?

- Houses in
- In schools
- Workplaces
- Factories
- On farms
- Construction sites
- Park in
- Picnic Places
- Shopping
- In the streets

The weight of the garbage that a person creates in a year is about seven times its own weight.

What happens if so much garbage occurs?

- Our environment is polluted,
 - Our waters are polluted,
 - Our soil is polluted,
 - More trees are cut,
 - Natural resources run out quickly,
 - Animals are damaged,
- More energy is needed,
Garbage landfills quickly fill,
It shortens the life span of our world.

Reducing all these effects can be done in 3 ways.

1. Az atık çıkartmak (REDUCE)
2. Tekrar kullanmak (REUSE)
3. Geri Dönüştürmek (RECYCLING)

3

Reduce

□ **Reduce/Reduction:**

to make something smaller or use less.

The result is a smaller amount of waste.

HOW

- . Only buy what you need, and use everything that you buy
- . Buy products that don't have much plastic packaging and buy things like recycled Paper
- . Use reusable bags at supermarkets

Reuse

□ You can "reuse" materials in their original form instead of throwing them away. You can also give materials to others who could use them after you.

HOW

- Use washable cups or travel mugs
- When you use things like plastic cups, plates, and plastic food storage bags, don't throw them away! Wash and reuse them.

Recycle

□ Remember
the things
you use
every day that
you can
recycle!!

- Aluminum cans
- . Cardboard
- . Electronics
- . Glass
- . Metal
- . Newspaper
- . Paper
- . Plastic Bottles
- . Steel cans

How Are Materials Recycled?

□ Materials are either brought to a center that collects recycled materials OR they are picked up from recycling bins that are on the streets

□ . The materials are then sorted, cleaned and reprocessed into new materials

PAPER

GLASS

MEDICAL

PLASTIC

Recycling is important because...

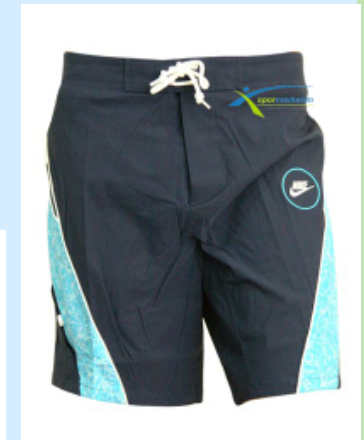

- It reduces the number of fresh raw materials we use
- It reduces the amount of energy we use
- It reduces air pollution
- It reduces water pollution
- It lowers the amount of greenhouse gases

- It is possible to make a sleeping bag out of 35 used 2.5 liter PET bottles.

- These sea shorts are made of 100% recycled pet bottle.

- It is possible to obtain a plastic jacket from 25 recycled beverage bottles.

Did you know....

During your lifetime, you will produce so much trash that it will weigh 600 times as much as you.

This would fill many trucks.

Thank You For Listening.. 🥰
