

Water filtration

We made a water filtration system as our product. It will be installed in your home so when you use water it will go down filters and be cleaned out. When it's cleaned out it will be kept in cylinder buried in the ground. Now every time you use water the recycled water will be used first. This will not only save you money, but it will also help save the world and diminish water waste. We want to make this water filtration to help the families and the world with our water problem.

Who is our customers?

Our target group is families that want to save money. We target families because they have the biggest usage of water. But the system is also good for people living alone. It's gonna take longer to save enough money for it to be worth buying if you live alone.

Why is our product the best on the market?

There isn't any product like ours yet and this will open up a whole new market that we will control. Our product is the best because it's environment friendly and it's made of recycled materials.
