Budd.E.R.S Project

Our idea was to make an app to help control your consumption in your house, because everybody has a tablet or a smartphone.

We decided to call our app "House Care", because it takes care of your house, in a much greener way and easier way

This app contains many ways to control your house and save on your consumption.

The home page contains an overall look of your house. But the first time you go into this app it will ask you for a username, password and if you forgot your password or if you are a new user.

If you are a new user, you will be asked about your name, last name, address, email 2x, password 2x.

And then it will send you a mail, were you have to conform it.

When you come into the app, it would already have found your house, and it's consumption.
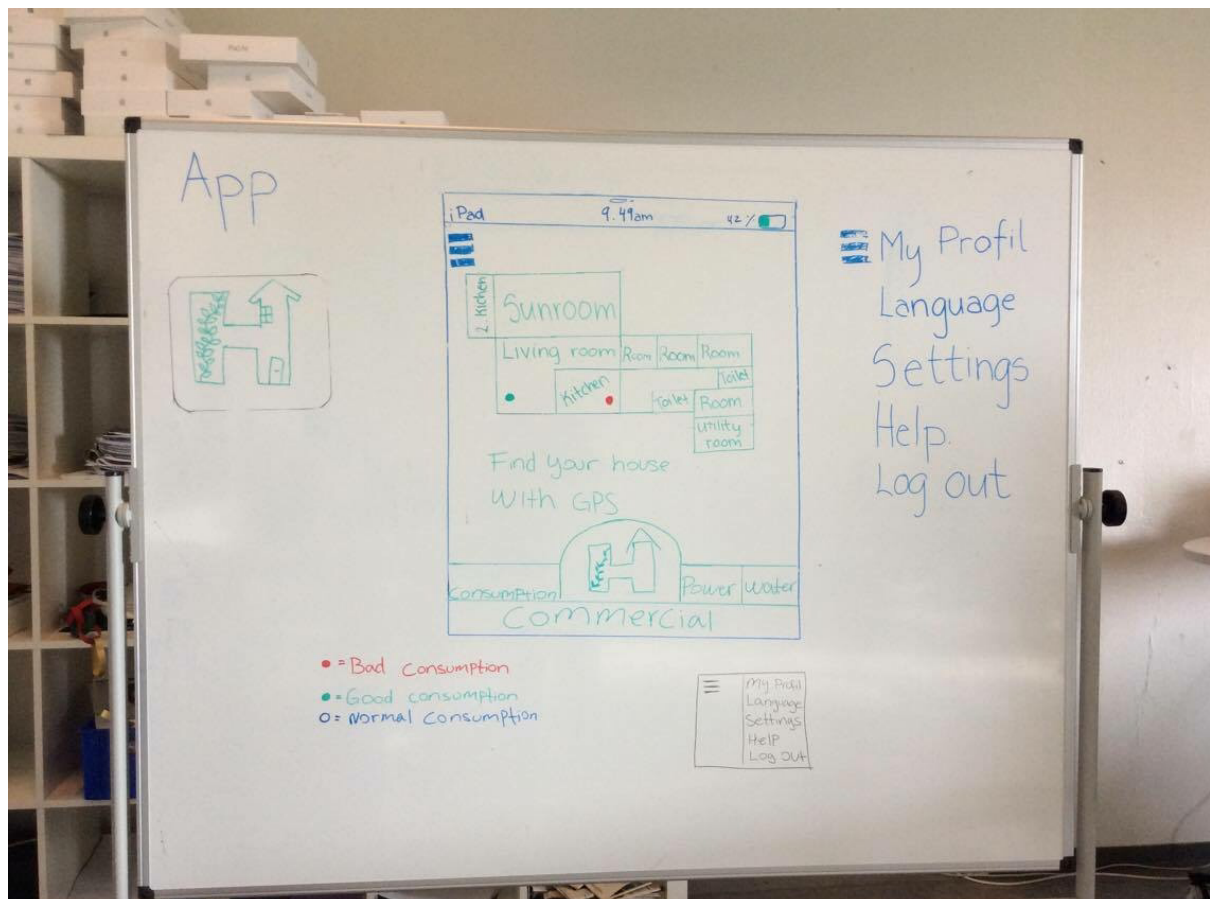

The app

To the left you can see 3 strips, which you can press on, and the some options will come up – My profile, language, settings, help and log out. When you press log out, it will ask you if you are sure, then you can press yes or no.

Language – Danish and English.

Settings – Notifications, tips to save power

- Sound
- Vibration
- Which kind of notifications (water)

My Profile – you can see you consumption for now and for the other months.

Help –you can search for help

Commercials – green companies (Danish PV Association (The company works together with England)).

Bad consumption – If your consumption is really bad, and you have used a lot of electricity or a have wasted a lot of water.

Good consumption – If you have saved on your electricity or water

Normal consumption – You haven't used to much of everything, but has a good balance between everything.

The logo of the app
