

THE DISCOVERY OF REUNION ISLAND

This year an unique opportunity was offered for four students in the Erasmus section from Notre-Dame college. One week on Reunion island at the La Salle Saint-Michel college.

After boarding at Orly airport in Paris and more than eleven hours flying, my first flight (that was fantastic), the discovery was total....the climate, the vegetation, the farming, the culture (music, houses with colours)!

I was enjoyed with differents things like:

- the vanilla plantation, to have a vanilla pod for consumption it needs about 6 years (plantation, hand pollination, growth, harvest and drying).

- the botanical garden,

- the surprise road trip on the last day,

- the meeting and the exchanges with Romanians and Spanish students,

because that was the first time that I have seen such things!!!!

The best excursion was:

-the dive in the lagoon, seabed exploration was unique

- the “Piton de la Fournaise”,

- the afternoon of shopping with Timéo and my teachers.

I appreciated the conference “plant reproduction and life cycle” even if I was very anxious about the oral presentation.

I liked less the afternoon with my host family because we didn't do anything.

This travel will stay in my memory. At my age it's a wonderful and exceptional experience. Thank you for giving me this chance!!
