

Company JAKUSZ, through implementation of new technologies, contributes to increasing public safety and creates conditions for optimal hazardous materials handling, ensuring the highest standards of environmental protection.

We strive to achieve a leading position in the international demilitarization market, offering complete and customized solutions.

*The company's activity is focused in the following areas:*

- Protection against explosion effects (explosion containment vessels),
- Specialized constructions for hazardous materials storage,
- Information security and critical infrastructure protection,
- Munitions disposal,
- Specialized training.

JAKUSZ has its own construction, Research & Development and production facilities. New technologies are being developed and tested in company's laboratories: Explo Lab, Ballistic Gel Lab, Electromagnetic Compatibility Lab.

Their products are developed thanks to involvement of team of professionals specializing in chemistry, mechanical constructions and military engineering, as well as through the cooperation with military and civilian scientific institutes in Poland and abroad. JAKUSZ company is also the organizer of scientific conferences and takes active part in popularization of International Mine Action Standards (IMAS) on Polish market. In close cooperation with their partner - demining company – they have created unique collection of UXO and misfires undertaken in Pomerania region since Napoleonic times.
