

Josu Doncel is a mathematician and teach mathematic on the university of Leioa in the Faculty of Science of the UPV/EHU because was close to his city. He is a researcher on mathematician for telecommunication networks. He always liked maths, but in the last years of the high school he had some motivating teachers and since he learnt a lot with them, he wanted to continue.

- **Did you teach in another University?**

Yes, in three universities in France, INSA Toulouse, IUT Blagnac and ENSIMAG.

- **What is the best thing of your job?**

Two things are the best, the interaction with students and carrying out research activities.

- **Why did you decide to teach at University?**

I have always wanted to teach, but I knew that the university was my place when I started the studies in the UPV/EHU. So, there was not decision at all :)

- **Why do you like Maths?**

I think they are interesting and can explain a lot of things: in the nature, in the space, in telecommunications...

- **What does your job consist on?**

My job consists of two things: first, teaching, where I have the main interaction with students and they listen to my courses and come to my office with questions; second, research, where I work with international researchers and also with members of my department.
