

This company:

It designs and manufactures 3d printers in Italy.

WASP's goal is to build 'zero mile' homes using materials found in the surrounding area. A similar project requires the machine to be portable and have low energy consumption, because large areas of the planet have no electricity. Therefore, it should be able to use renewable energies such as sun, wind and water.

# ***WORLD'S ADVANCED SAVING PROJECT***

Home, Art and Culture, Energy, Digital Manufacturing, Health and Food are themes that we develop in the form of concrete projects with our 3D Printers.
