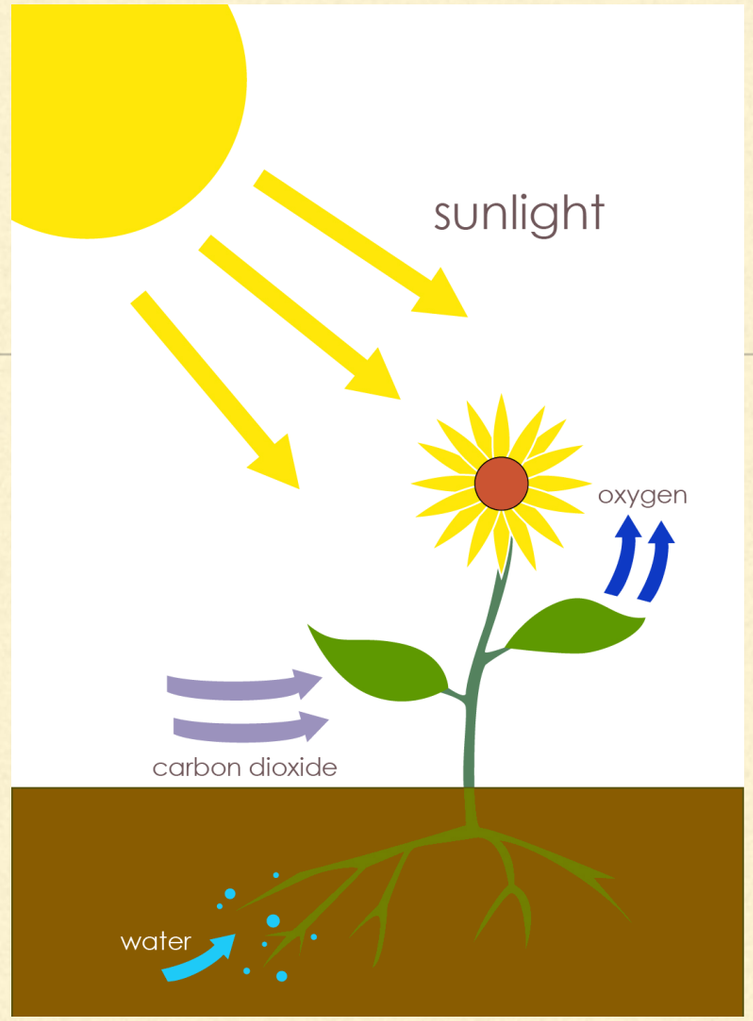
# Photosynthesis

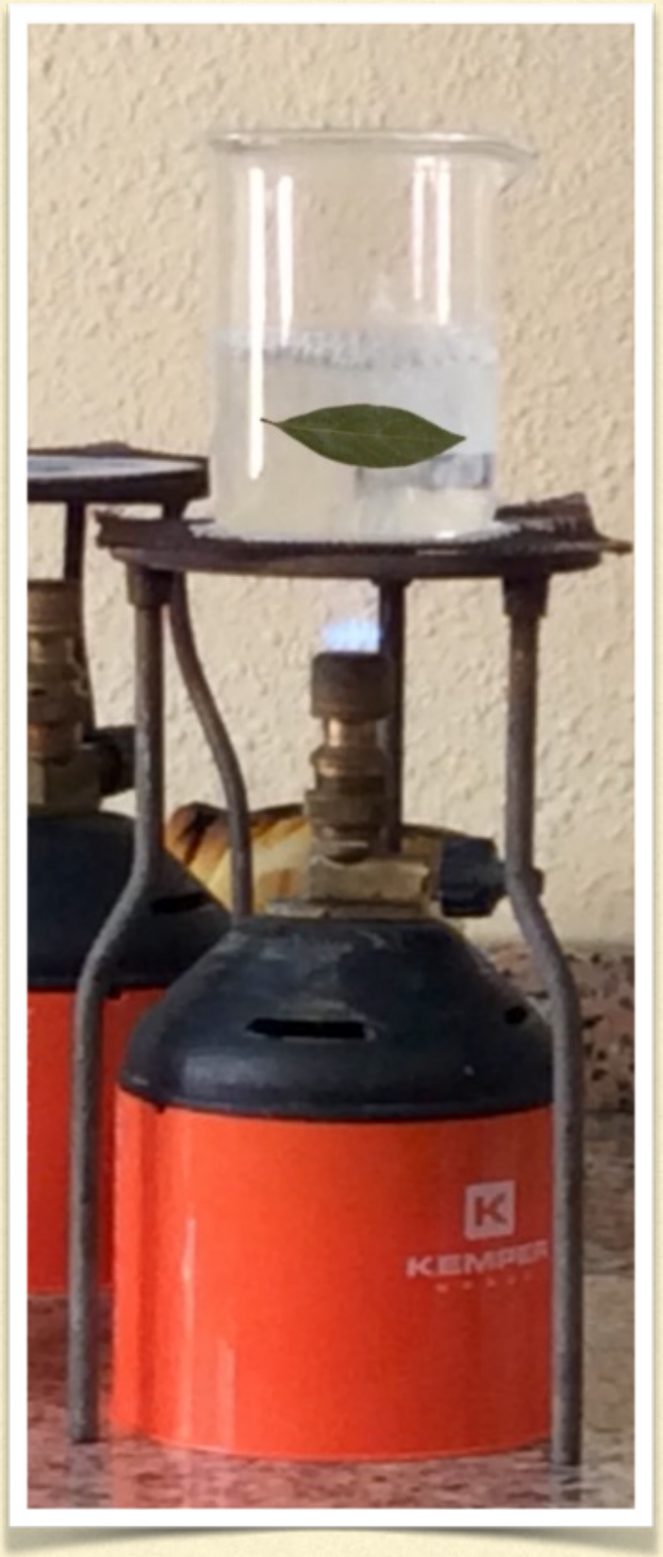
*Maria Perez*
*Paula Palop and*
*Sara Martinez*



First turn the burner 🔥

After put over a beaker with water for 3  minutes 💦

In the beaker put a leaf , wait 4 minutes



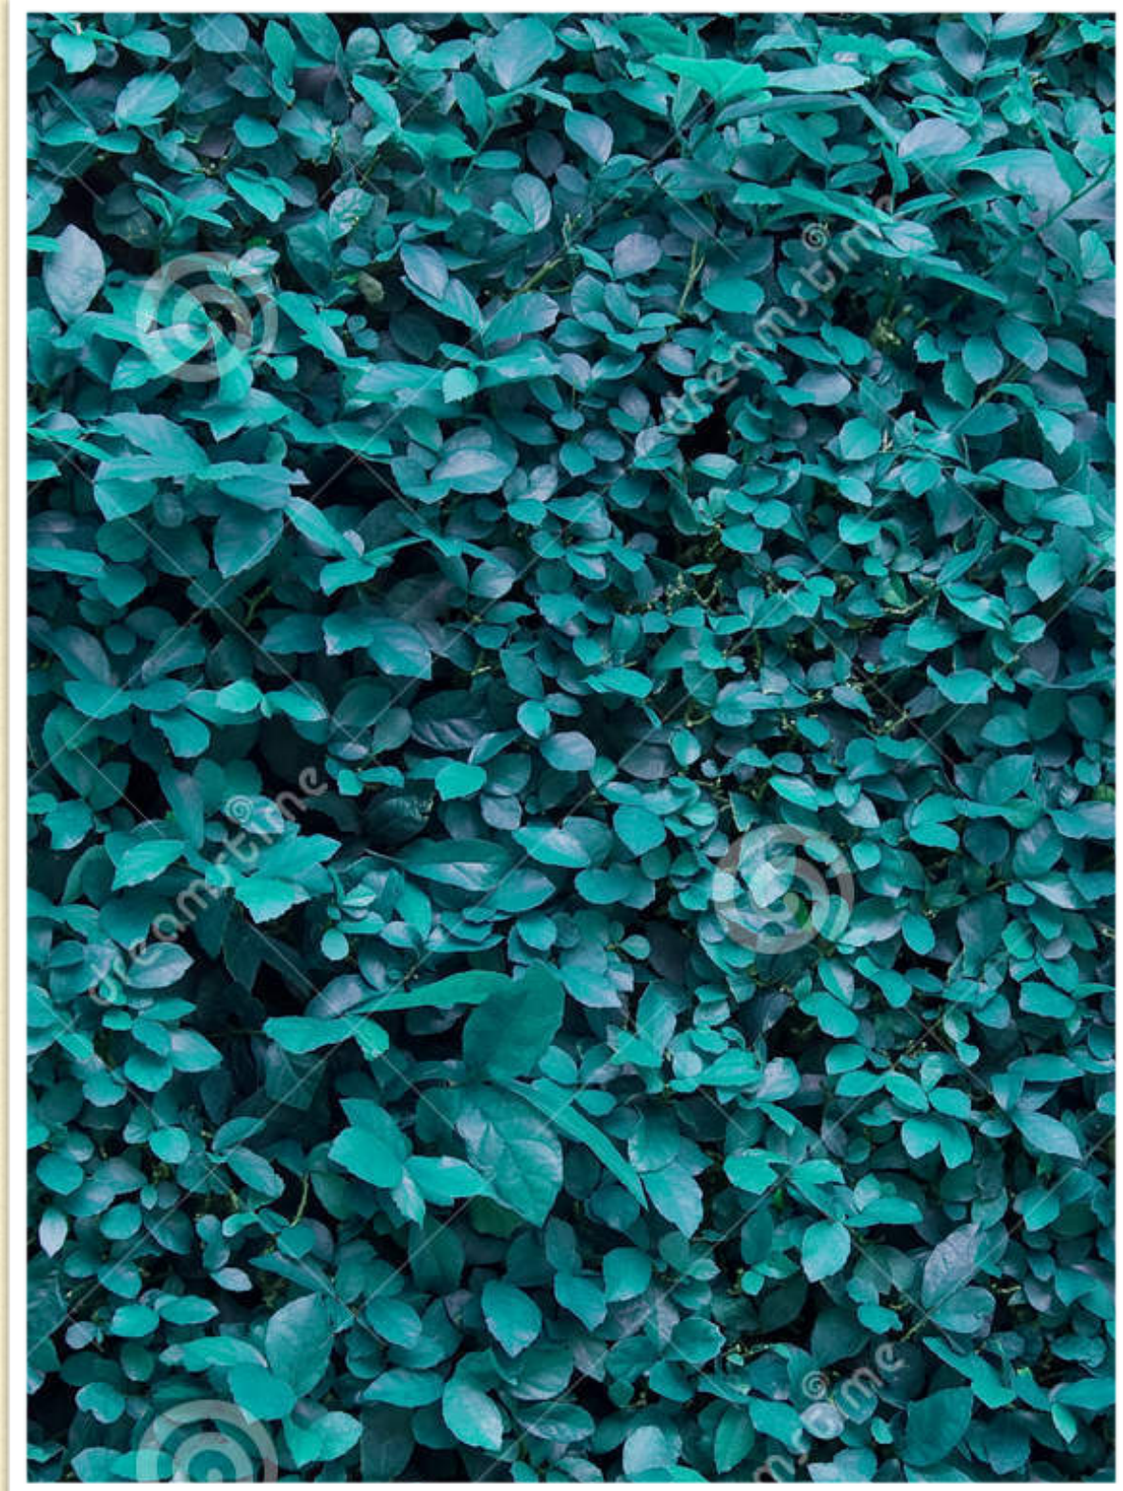
After that take the leaf out of the beaker 💧

Then cut the leaf in little pieces and put it in the test tube

When you finish that put into the test tube a little bit of alcohol 💊

Then put the the test tube into the beaker and leave it for 2 minutes.⏰

After that empty the alcohol and take out the pieces of the leaf for they get dry☀️

When you finish that put over the pieces of leaf  a little bit of Lugol , and wait for 4 days ⏲️


And after 4 days if the leaf color is blue, minds that that life has done the photosynthesis.
