

ERASMUS+ PROJECT THE SPIRIT OF RESPONSIBILITY FOR ENVIRONMENT

On November 13, 2019, the Romanian students and several teachers involved in the project had a meeting with members of Greenpeace Romania and of an NGO, "Fridays for Future". It was an interesting debate on the topic of climate change, global warming and greenhouse effect, and also about pollution and the other harming factors which affect people's health. On this occasion, we found out aspects of their activity, also about actions of protest on national level. Our students expressed their point of view regarding these issues and came up with solutions to the serious environmental problems we are facing nowadays. The two organisations made presentations of their plans of action, meant to make preserve the air, land, forests and water clean, safe and healthy. Students expressed their will to become active participants in actions related to improve the quality of the air we breathe, to make volunteer work to clean public space and surroundings, to help the decision factors take the best steps to protect nature.
