

Evaluating the ERASMUS experience

My name is Apostolos and I am a part of the ERASMUS exchange program 2021-22. In the program we have all learned things we wouldn't have had the chance to if we weren't part of the program.

This year the program was based on environmental issues. The importance of recycling and reusing had a big impact on me and because of that I've started being more sensitive on what I use and where I throw each item. Even though the program was informative in climate and environmental issues it also really helped with our international relations. Because of the program we were working with students from different countries. From them we learned about different cultures and ideas for the improvement of the environment,

With that being said, because we worked with students from other countries we knew we would practice our English and after spending a week with them we were.... almost fluent. We worked together in groups and we learned how to trust each other and create amazing work. Although the program was great we had many problems involving Covid-19, we couldn't always meet to do work and some of the students couldn't even visit different countries because of the restrictions.

To sum up the program was both helpful and insightful and it made a year of school more fun and it certainly will be a memorable year. Thank you!
